Lake  
Management  
Plans

**VISION**

*Green Lake will remain a quiet Northwoods lake where great swimming and fishing, clean water and family traditions come together.*

# Green Lake Management Plan

The authors would like to acknowledge the commitment and enthusiasm of Oconto County Lakes & Waterways Association, Oconto County Land and Water Conservation Department, UW Extension – Oconto County, Wisconsin Department of Natural Resources, UW-Stevens Point Water and Environmental Analysis Laboratory, landowners in the Green Lake watershed, and participants in the Oconto County Lakes Project.

This plan was prepared by the Center for Watershed Science and Education at University of Wisconsin – Stevens Point.

Along with the Oconto County Lakes Project participants, the following individuals and organizations contributed to the content of this plan.

| <b>Green Lake Planning Participants</b> |                      |
|---|----------------------|
| Brian Shefe                             | Kate Schuette        |
| Jim & Laurie Hittman                    | John Seidl           |
| Tom Giese                               | Teresa VanEss        |
| Pat Peeters                             | Ed & Marlene Morley  |
| Scott Berken                            | Larry Coenen         |
| Mike Donovan                            | Bill LaLuzerne       |
| Joanie Reuss                            | Cheryl Thompson      |
| Scott Siebert                           | Troy Thompson        |
| Dave Tessmer                            | Sue Cravillion       |
| Bill & Pat Gilbert                      | Brad LaLuzerne       |
| Dan Miller                              | Jim & Elaine Tessmer |
| Steve Heimerman                         |                      |

# Background

## ABOUT GREEN LAKE

Green Lake is located in the Town of Mountain, in northeast Wisconsin. This 21-acre seepage lake has a maximum depth of 25 feet with moderately clear water. Its bottom sediments are primarily sand with muck and some gravel. Visitors have access to the lake from one public boat landing on the lake's west side, which is owned and maintained by the US Forest Service. Water enters and leaves Green Lake primarily from groundwater.

# What Is A Lake Management Plan?

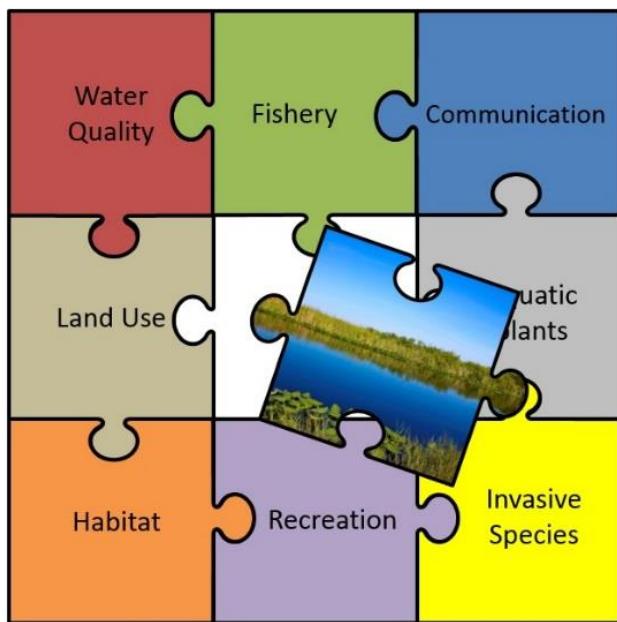

## LAKE MANAGEMENT PLANS (LMP)

### What is an LMP?

A management plan is a living document that changes over time to meet the current needs, challenges and desires of the lake and its community. Although each lake is different, the WDNR requires that each comprehensive lake management plan addresses a specific list of topics affecting the character of the lake, whether each topic has been identified as a priority, or as simply something to consider. In this way, every LMP considers the many aspects associated with lakes.

### What is the purpose of this LMP?

This plan was created to ensure that Green Lake is healthy now and for future generations. It was designed to learn about Green Lake and identify features important to the Green Lake community, in order to provide a framework for the protection and improvement of the lake.

Implementing the content of this LMP will enable citizens and others to work together to achieve the vision for Green Lake now and in the years to come. It is a dynamic document that identifies goals and action items for the purpose of

maintaining, protecting and/or creating desired conditions in the lake and identifies steps to correct past problems, improve on current conditions, and provide guidance for future boards, lake users, and technical experts.

Because many entities are involved in lake and land management, it can be challenging to navigate the roles, partnerships and resources that are available. The planning process and content of this plan have been designed to identify where some key assistance exists. The actions identified in this LMP can serve as a gateway for obtaining grant funding and other resources to help implement activities outlined in the plan.

# How Was This Plan Created?

## **ABOUT THIS PLAN**

One of the first steps in creating this plan was to gather and compile data about the lake and its ecosystem to understand past and current conditions. This was done in 2018-2019 alongside 5 other lakes as part of the Oconto County Lakes Project. The project was initiated by citizens in the Oconto County Lakes and Waterways Association who encouraged Oconto County to prioritize lake interests. This effort led to funding from the WDNR Lake Protection Grant Program. There was insufficient data available for many of the lakes to evaluate current water quality, aquatic plant communities, invasive species, and shorelands. The data that were available had been collected at differing frequencies or periods of time, making it difficult to compare lake conditions. Professionals and students from UW-Stevens Point, Oconto County Land Conservation Department, UW Extension, Oconto County citizens and WDNR staff collected the data for use in the development of lake management plans. Sources of information used in the planning process are listed at the end of this document.

Reports from the Green Lake Study and the materials associated with the planning process and reports can be found on the Oconto County website: [www.co.oconto.wi.us](http://www.co.oconto.wi.us) and navigating to Departments>Land Conservation>County Waterways>County-wide Lake Study.

## **THE PLANNING PROCESS**

### **Who created the strategic plan?**

This plan is the result of a stakeholder-driven effort which involved many partners combining insight, knowledge, and expertise throughout the process. Area residents, lake users, and representatives of local municipalities gathered at public

meetings held on June 22, 2018 at the Mountain Community Center and on January 28, 2021 via an online platform to learn from one another and make decisions about the fishery, water quality, habitat, and land management in the Green Lake watershed. Technical assistance during the planning process was provided by staff from OCLCD, UWEX, WDNR, and the CWSE.

### **How were various opinions incorporated?**

Participation in the planning process was open to everyone and was encouraged by letters mailed to Green Lake waterfront property owners and by press releases in local newspapers. In addition, those individuals and organizations who provided their information were provided with emails about upcoming meetings, which could be forwarded to additional contact lists. To involve and collect input from as many people as possible, including those who might not be able to attend the public meetings, an online survey was conducted. Property owners and interested lake users were notified about the survey and how to access it via direct mailings to waterfront property owners and associated lake organizations and press releases in local newspapers. The surveys could be

filled out  
anonymously  
online, or paper  
copies were  
available upon  
request. Survey  
questions and  
responses were  
shared at the  
planning sessions  
and can be found  
in the Appendix.

# How Is This Management Plan Used?

## Who will use this plan?

- **Individuals:** Individuals can use this plan to learn about the lake they love and their connection to it. People living near the lake can have the greatest influence on the lake by understanding and choosing lake-friendly options to manage their land and the lake.
- **A future lake association:** This plan provides an association with guidance for the whole lake and lists options that can easily be prioritized. Resources and funding opportunities for lake management activities are made more available by placement of goals into the lake management plan, and the association can identify partners to help achieve their goals for the lake.
- **Neighboring lake groups, sporting and conservation clubs:** Groups with similar goals for lake stewardship can combine their efforts and provide each other with support, improve competitiveness for funding opportunities, and make efforts more fun.
- **The Town of Mountain:** Municipalities can utilize the visions, objectives, and goals documented in this lake management plan when considering town-level planning or decisions within the watershed that may affect the lake.
- **Oconto County:** County professionals will better know how to identify needs, provide support, base decisions, and allocate resources to assist in lake-related efforts documented in this plan. This plan can also inform county board supervisors in decisions related to Oconto County lakes, streams, wetlands, and groundwater.
- **Wisconsin Department of Natural Resources (WDNR):** Professionals working with lakes in Oconto County can use this plan as guidance for management activities and decisions related to the management of the resource, including the fishery, and invasive species. LMPs help them to identify and

prioritize needs, and where to apply resources. A well thought out lake management plan increases an application's competitiveness for funding from the State.

## Who can help implement this plan?

Lead persons and resources are identified under each action in this plan. These individuals and organizations are able to provide information, suggestions, or services to achieve goals. The following table lists organization names and their common acronyms used in this plan. This list should not be considered all-inclusive – assistance may also be provided by other entities, consultants, and organizations.

# Management Plan Structure

## GOALS FOR GREEN LAKE

The foundation of any effective strategic plan is clear identification of goals and the steps needed to achieve the goals. The selected goals should achieve the overall vision for Green Lake. This plan also identifies available resources within each objective.

The topics comprise the chapters in this plan and have been grouped as follows:

### In-Lake Habitat and a Healthy Lake

Fish Community—fish species, abundance, size, important habitat and other needs

Aquatic Plant Community—habitat, food, health, native species, and invasive species

Critical Habitat—areas of special importance to the wildlife, fish, water quality, and aesthetics of the lake

### Landscapes and the Lake

Water Quality—water chemistry, clarity, contaminants, lake levels

Shorelands—habitat, erosion, contaminant filtering, water quality, vegetation, access

Watershed—land use, management practices, conservation programs

### People and the Lake

Recreation—access, sharing the lake, informing lake users, rules

Communication and Organization—maintaining connections for partnerships, implementation, community involvement

Updates & Revisions—plan for maintaining a living document

# Green Lake Management Plan Goals

## **Goals for Green Lake**

The following goals and actions were derived from the values and concerns of citizens interested in Green Lake and members of the planning committee, as well as the known science about Green Lake, its ecosystem and the landscape within its watershed.

Implementing and regularly updating the goals and actions in this plan will ensure that the vision is supported and that changes are incorporated into the plan.

## **LIST OF GOALS**

|               |   |
|---------------|---|
| <b>Goal 1</b> | <b>The fishery in Green Lake will be healthy, well-balanced and self-sustaining.</b>  |
| <b>Goal 2</b> | <b>Green Lake will have a healthy, diverse aquatic plant community free of invasive species that provides essential habitat and good water quality.</b>   |
| <b>Goal 3</b> | <b>Sensitive areas in Green Lake, which provide essential habitat and/or water quality benefits, will be protected.</b>   |
| <b>Goal 4</b> | <b>Property owners in the Green Lake watershed will be aware of their connection to the lake and implement healthy land management practices.</b>   |
| <b>Goal 5</b> | <b>Shorelands around Green Lake will be healthy and protective of water quality and habitat. Over the next 5 years, at least 500 feet of mowed shoreline (at least 7-10 properties) will be restored.</b> |
| <b>Goal 6</b> | <b>Maintain or improve water quality in Green Lake.</b>   |
| <b>Goal 7</b> | <b>Lake users will be informed about and respectful of Green Lake.</b>  |
| <b>Goal 8</b> | <b>Increase participation in lake stewardship.</b>  |
| <b>Goal 9</b> | <b>Review plan regularly and update as needed.</b>  |

# Fish Community

## IN-LAKE HABITAT AND A HEALTHY LAKE

The health of one part of the lake system affects the health of the rest of the plant and animal community, the experiences of the people seeking pleasure at the lake, and the quality and quantity of water in the lake. Habitat is the structure for a healthy fishery and wildlife community. It can provide shelter for some animals and food for others. Many animals that live in and near the lake are only successful if their habitat needs are met.

### What is lake-habitat?

Healthy lake-habitat in Green Lake includes native aquatic plants and shoreland vegetation, as well as tree branches/limbs above and below the water.

Habitat exists within the lake, along the shoreland, and even extends into its watershed for some wildlife species. Native vegetation (including wetlands) along the shoreline and connected to the lake provides shelter and food for waterfowl, small mammals, turtles, frogs, and fish. Native plants in and near the lake can also improve water quality and balance water quantity. Aquatic plants infuse oxygen into the water, which is essential for the fish community. Some lake visitors such as birds, frogs, and turtles use limbs from trees that are sticking out of the water for perches or to warm themselves in the sun. The types and

### What People Value about Green Lake

Family long history on the lake and appearance of the lake

Nice gravel bottom is great for swimming.

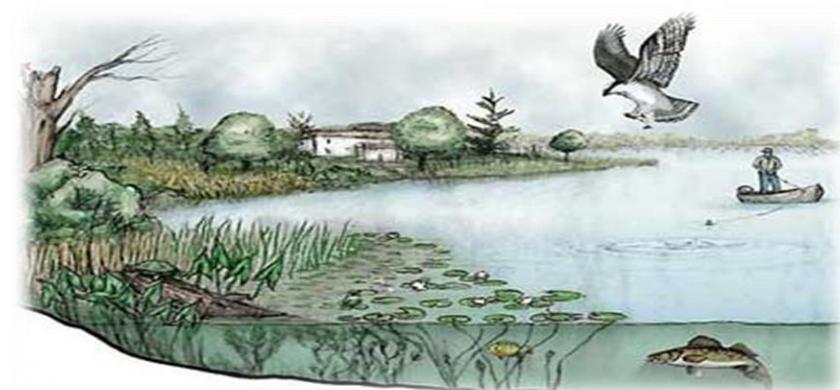

Recreation-fishing, swimming, canoeing, etc.

Small, no wake lake is awesome.

Water clarity. Generally quiet.

Clean water.

Habitat provides shelter and food for fish and wildlife.

abundance of plants and animals that comprise the lake community also vary based on the water quality, and the health and characteristics of the shoreland and watershed.

## The Fish Community

A balanced fish community has a mix of predator and prey species, each with different food, habitat, nesting substrate, and water quality needs to flourish.

### What can affect the fishery?

Activities in and around a lake that can affect a fishery include:

- disturbances to the native aquatic plant community or substrate,
- excessive additions of nutrients or harmful chemicals,
- removal of woody habitat,
- shoreline alterations,
- shoreland erosion can cause sediment to settle onto the substrate, causing the degradation of spawning habitat.

# Fish Community

## Can the fishery be improved?

Managing a lake for a balanced fishery can result in fewer expenses to lake stewards and the public. While some efforts may be required to provide a more suitable environment to meet the needs of the fish, they usually do not have to be repeated on a frequent basis. Ideally, a lake contains the habitat, water quality, and food necessary to support the fish communities present within the lake and provide fishing opportunities for people without a lot of supplemental effort and associated expenses to maintain these conditions.

- Protecting existing habitat such as emergent, aquatic, and shoreland vegetation, and allowing trees that naturally fall into the lake to remain in the lake, are free of cost.
- Restoring habitat in and around a lake can have an up-front cost, but the effects will often continue for decades.
- Costs in time, travel, and other expenses are associated with routine efforts such as fish stocking and aeration.

### Green Lake Fish Management History

- ✓ 1965-1969 rainbow trout stockings.
- ✓ Last fish survey done in 1978 following winterkill.
- ✓ Winterkill in winter 1977-1978 resulted in overabundance of small bullheads and black crappie. No other fish kills reported, but oxygen profiles suggest possibility.
- ✓ Further fish management was not justified due to “threat of periodic winterkill”.
- ✓ Fish sticks installed in February 2017 with county grant to increase fish habitat.
- ✓ Fish cribs installed 2021.

| Stocking Date | Species        | # Stocked | Age Class |
|---------------|----------------|-----------|-----------|
| 1996          | Fathead minnow | 10,500    | Adult     |
| 1998          | Black crappie  | 300       | Yearling  |
| 1998          | Pumpkinseed    | 300       | Yearling  |

### Green Lake June 2, 2016 Fish Survey Results

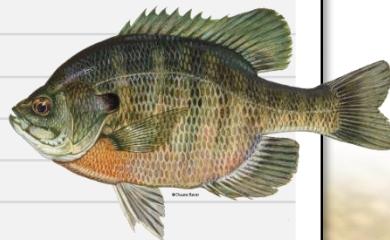

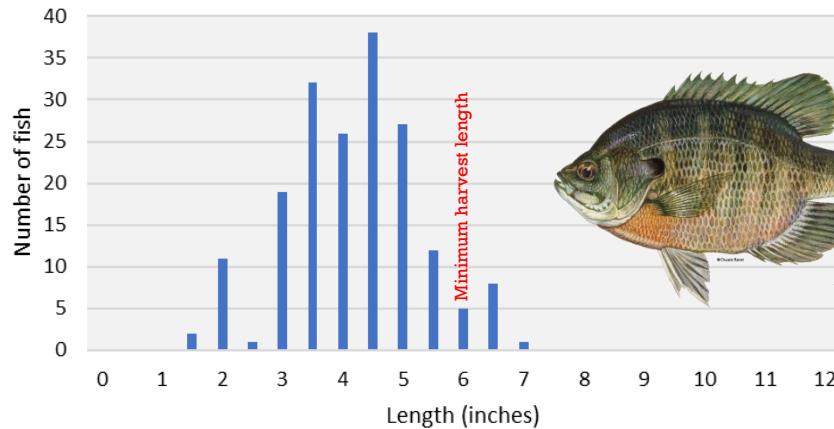

- ✓ Last previous survey in 1978.
- ✓ Electrofishing survey observed a total of 232 fish and eight species: Bluegill, pumpkinseed, rock bass, largemouth bass, yellow perch, northern pike, black crappie and hybrid sunfish.
- ✓ Bluegill most abundant (219/mile). Growth slightly below average.
- ✓ Largemouth bass growth slightly below average.
- ✓ Next survey not likely for 10+ years due to lake size.

| Species                  | Number Collected | Average length (in) | Minimum length | Maximum length | CPUE (fish/mile) |
|--------------------------|------------------|---------------------|----------------|----------------|------------------|
| Bluegill                 | 182              | 4.4                 | 1.3            | 7              | 219.3            |
| Pumpkinseed              | 16               | 5.2                 | 2.5            | 7              | 19.3             |
| Rock Bass                | 13               | 6.6                 | 4              | 8              | 15.7             |
| Largemouth Bass          | 9                | 10.4                | 5              | 15.5           | 10.8             |
| Yellow Perch             | 6                | 4.8                 | 3.5            | 5.5            | 7.2              |
| Northern Pike            | 2                | 11                  | 7              | 14.5           | 2.4              |
| Black Crappie            | 2                | 9.3                 | 9              | 9.5            | 2.4              |
| Hybrid Sunfish (PKS+BLG) | 2                |                     |                |                | 2.4              |
| <b>Total</b>             | <b>232</b>       |                     |                |                |                  |

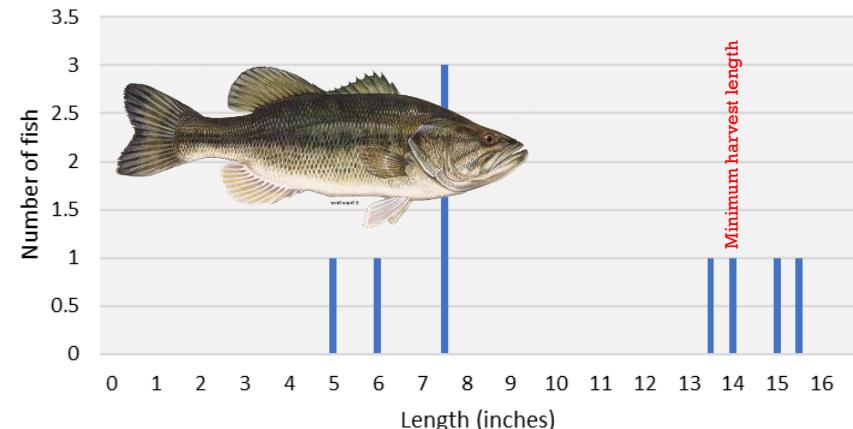

# Fish Community

 Fish cribs are good cover for small fish, but near shore habitat is essential for reproduction of most species.

Bluegill Size Distribution

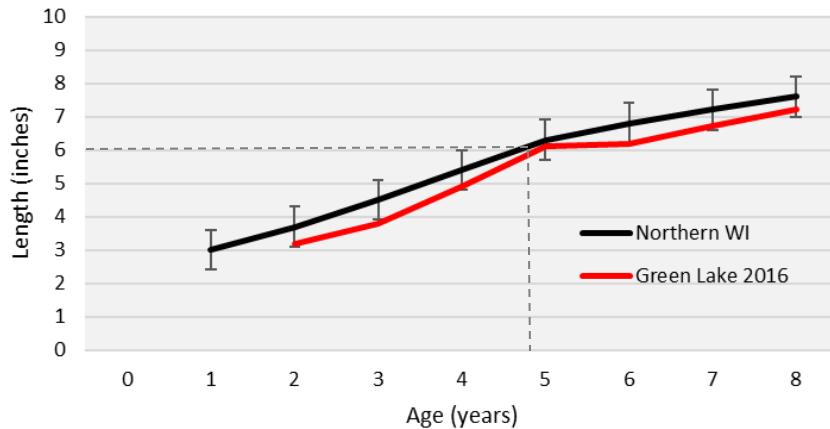

Largemouth Bass Size Distribution

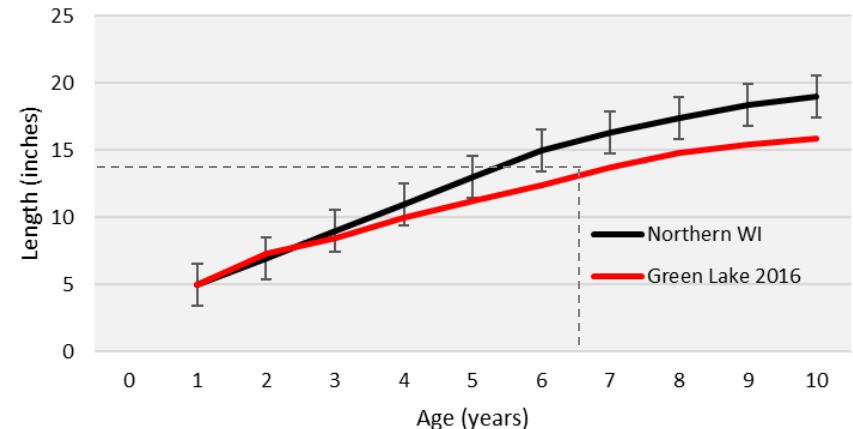

Minimum harvest length

Bluegill Mean Length at Age (+/- 1 SD)

Largemouth Bass Mean Length at Age (+/- 1 SD)

# Fish Community

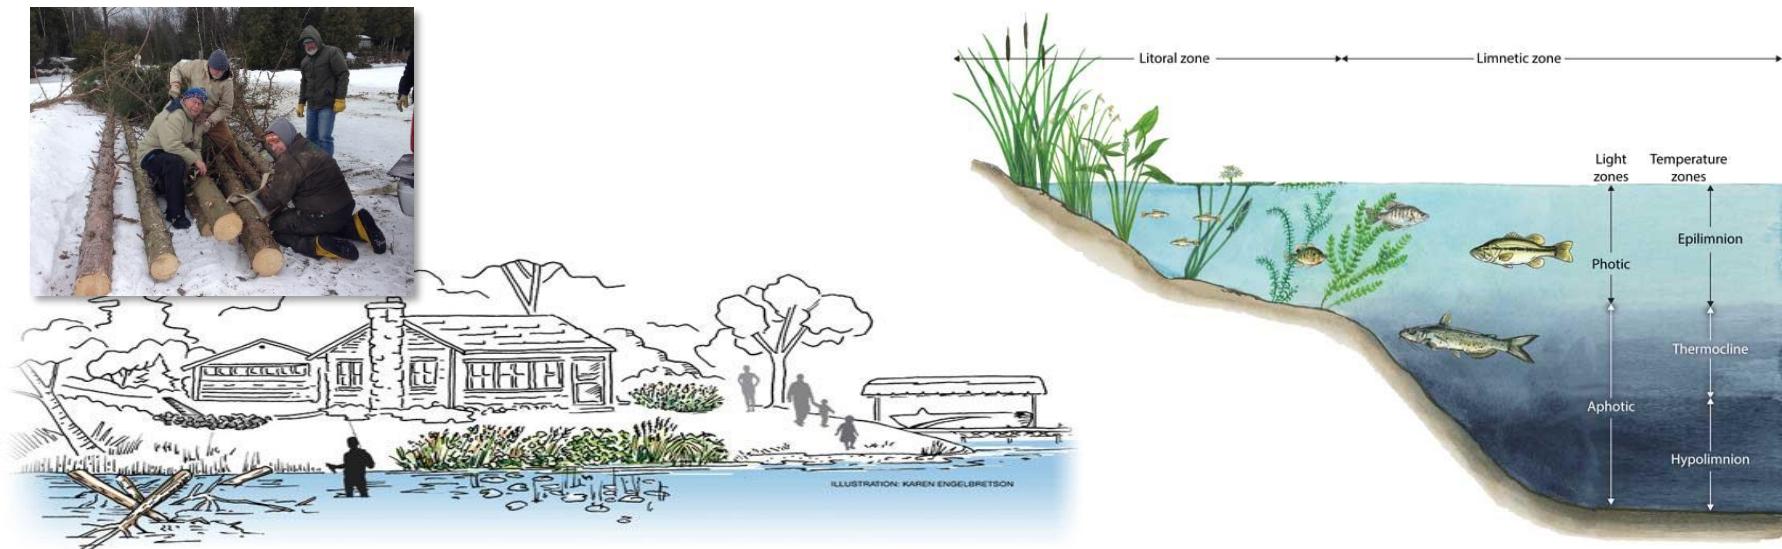

**Goal 1. The fishery in Green Lake will be healthy, well-balanced and self-sustaining.**

**Objective 1.1 Manage for a healthy balance of predator and panfish populations.**

| Actions  | Lead person/group | Resources      | Timeline |
|--|-------------------|----------------|----------|
| Encourage catch-and-release for largemouth bass. |                   | WDNR-Chip Long | Ongoing  |

**Objective 1.2 Continue to enhance fish and wildlife habitat in and around the lake.**

| Actions  | Lead person/group | Resources                         | Timeline  |
|--|-------------------|-----------------------------------|-----------|
| Monitor winter dissolved oxygen concentrations. A DO meter can be borrowed from OCLCD.   |                   | OCLCD<br>WDNR-Brenda Nordin       | Winters   |
| If DO concentrations indicate a problem, or if additional winterkills occur, consider installation of aerators.                          |                   | WDNR-Chip Long                    | As needed |
| Continue to identify and support landowners interested in fish sticks (at least 10% of properties with fish sticks is recommended).      |                   | WDNR-Chip Long                    | Ongoing   |
| Educate and encourage landowners to leave logs, tree branches, and limbs in place in the water, whenever possible.                       |                   | WDNR-Chip Long<br>UWEX-Pat Goggin | Ongoing   |
| Continue to protect and restore shoreland areas and avoid shoreland alterations to improve fish habitat (see <b>Shorelands</b> section). |                   | Shoreland property owners         | Ongoing   |

# Aquatic Plant Community

## Aquatic Plants

Aquatic plants provide the forested landscape within Green Lake. They provide food and habitat for spawning, breeding, and survival for a wide range of inhabitants and lake visitors including fish, waterfowl, turtles, amphibians, as well as invertebrates and other animals. They improve water quality by releasing oxygen into the water and utilizing nutrients that would otherwise be used by algae. A healthy lake typically has a variety of aquatic plant species, which makes the aquatic plant community more resilient and can help to prevent the establishment of non-native aquatic species. Additionally, they stabilize the bottom sediment and help filter out the suspended sediment from the water column.

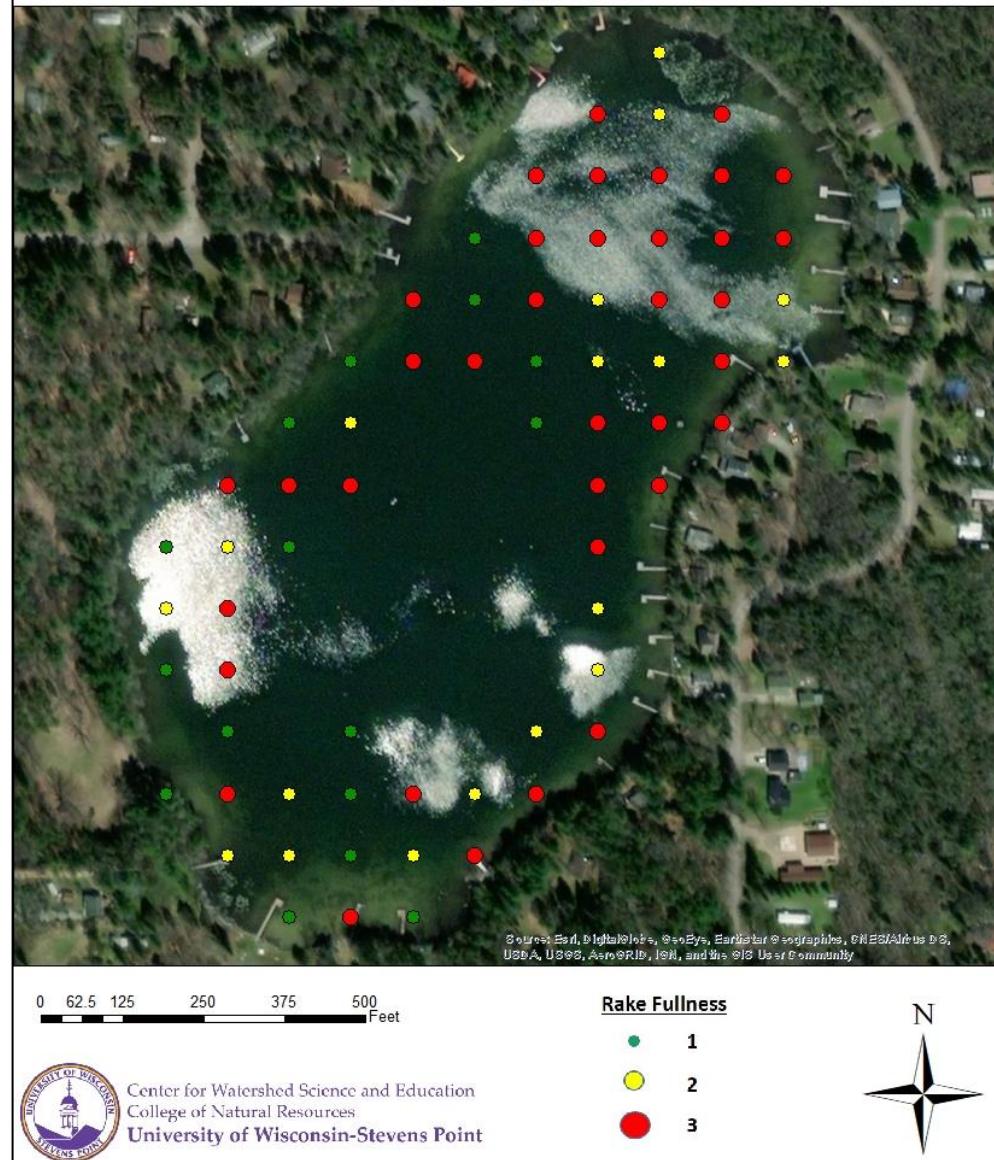

Aquatic plants near shore and in shallows provide food, shelter, and nesting material for shoreland mammals, shorebirds and waterfowl. It is not unusual for otters, beavers, muskrats, weasels, and deer to be seen along a shoreline in their search for food, water or nesting material. Aquatic plants also serve as indicator species for environmental stressors that could be occurring in a lake or river, such as a runoff event.

### Green Lake 2015 Aquatic Plant Survey Highlights

- ✓ 71% (70 of 98) of the sites visited had vegetative growth.
- ✓ The greatest depth aquatic plants were found was 16 feet.
- ✓ 14 species of aquatic plants were identified. This is below the North Central Hardwood average of 16.2.
- ✓ The three most dominate species were chara (67%), wild celery (46%), southern naiad (44%).
- ✓ The Floristic Quality Index (FQI) was 21.7. The northcentral hardwood average is 23.3.
- ✓ No invasive species were observed.

Native plants provide essential food and habitat for fish and wildlife.

## Green Lake Aquatic Plant Survey 2015: Rake Fullness

# Aquatic Plant Community

**Chara** is a type of macro algae that grows attached to muddy lake bottoms and has a musky odor.

Muskgrass, as it is known, filters the lake water and is helpful in preventing the establishment of invasive species.

that can damage boat motors, make areas non-navigable, inhibit activities like swimming and fishing, and disrupt the lakes' ecosystems.

No invasive species were observed during the 2015 survey. However, **Banded mystery snails** and **Chinese mystery snails** were documented in Green Lake in 2016. Not a lot is known about the impacts of these two species, but they have been

shown to compete with native populations of snails and possibly serve as a vector for parasites and disease.

A point-intercept survey per the DNR protocol is recommended every 5 years to detect changes in the plant community and detect any AIS.

## Aquatic Plant Management in Green Lake

Management strategies in Green Lake were designed to achieve a balance between healthy aquatic habitat, good water quality, and eradication of invasive species.

**Southern naiad**, also called bushy pondweed, is a primary food source for ducks and provides habitat for many invertebrates.

## Aquatic Invasive Species (AIS)

Aquatic invasive species are non-native aquatic plants and animals that are most often unintentionally introduced into lakes by lake users. This commonly occurs on trailers, boats, equipment, and from the release of bait. In some lakes, aquatic invasive plant species can exist as a part of the plant community, while in other lakes populations explode, creating dense beds

## Management Options for Invasive Species or Nuisance Native Aquatic Plants

Management options that offer the most practical and effective approaches for managing invasive species or nuisance native plants, while minimizing impacts to Green Lake as a whole, have been identified. Depending upon conditions, the following options may be used alone or in combination with others.

**Hand-pulling.** No permit required.

# Aquatic Plant Community

Hand-pulling is the preferred method for removing invasive species. Additionally, lakefront property owners are allowed to manually remove native aquatic plants from an area up to 30 feet wide without a permit for swimming and boat access (this does not include the excavation or removal of any bottom sediments). Any denuded lakebed is prime real estate for invasive species, however, and close monitoring is necessary to ensure no populations are established.

**Goal 2. Green Lake will have a healthy, diverse aquatic plant community free of invasive species that provides essential habitat and good water quality.**

*Objective 2.1 Minimize disturbance to native aquatic plants.*

| Actions   | Lead person/group | Resources                         | Timeline  |
|---|-------------------|-----------------------------------|---|
| Inform property owners of the importance of native aquatic vegetation to impede the establishment of AIS, provide food and habitat for wildlife, and protect the shoreline by sending educational materials and/or newsletter.  |                   | WDNR-Brenda Nordin                | Ongoing   |
| Encourage landowners to limit plant removal to invasive species or skimming off those that have become unrooted and free-floating. If plants severely impede access, consider hand-pulling small areas around private docks (within WDNR guidelines). Cleared lakebed is ideal habitat for AIS to become established, so be vigilant about watching for AIS in these areas. |                   | WDNR-Brenda Nordin                | Ongoing   |
| Regularly monitor aquatic plant community to detect any changes in lake conditions and ensure stable populations. A point-intercept survey is recommended.  |                   | WDNR-Brenda Nordin<br>Consultants | Every 10 years if no active plant management taking place |
| Reduce nutrient and sediment loading to lake (to limit abundance of plants and algae) by improving shoreland buffers (see <b>Shorelands</b> section) and implementing BMPs in the watershed (see <b>Watershed</b> section).   |                   | WDNR-Brenda Nordin<br>OCLCD       | Ongoing   |

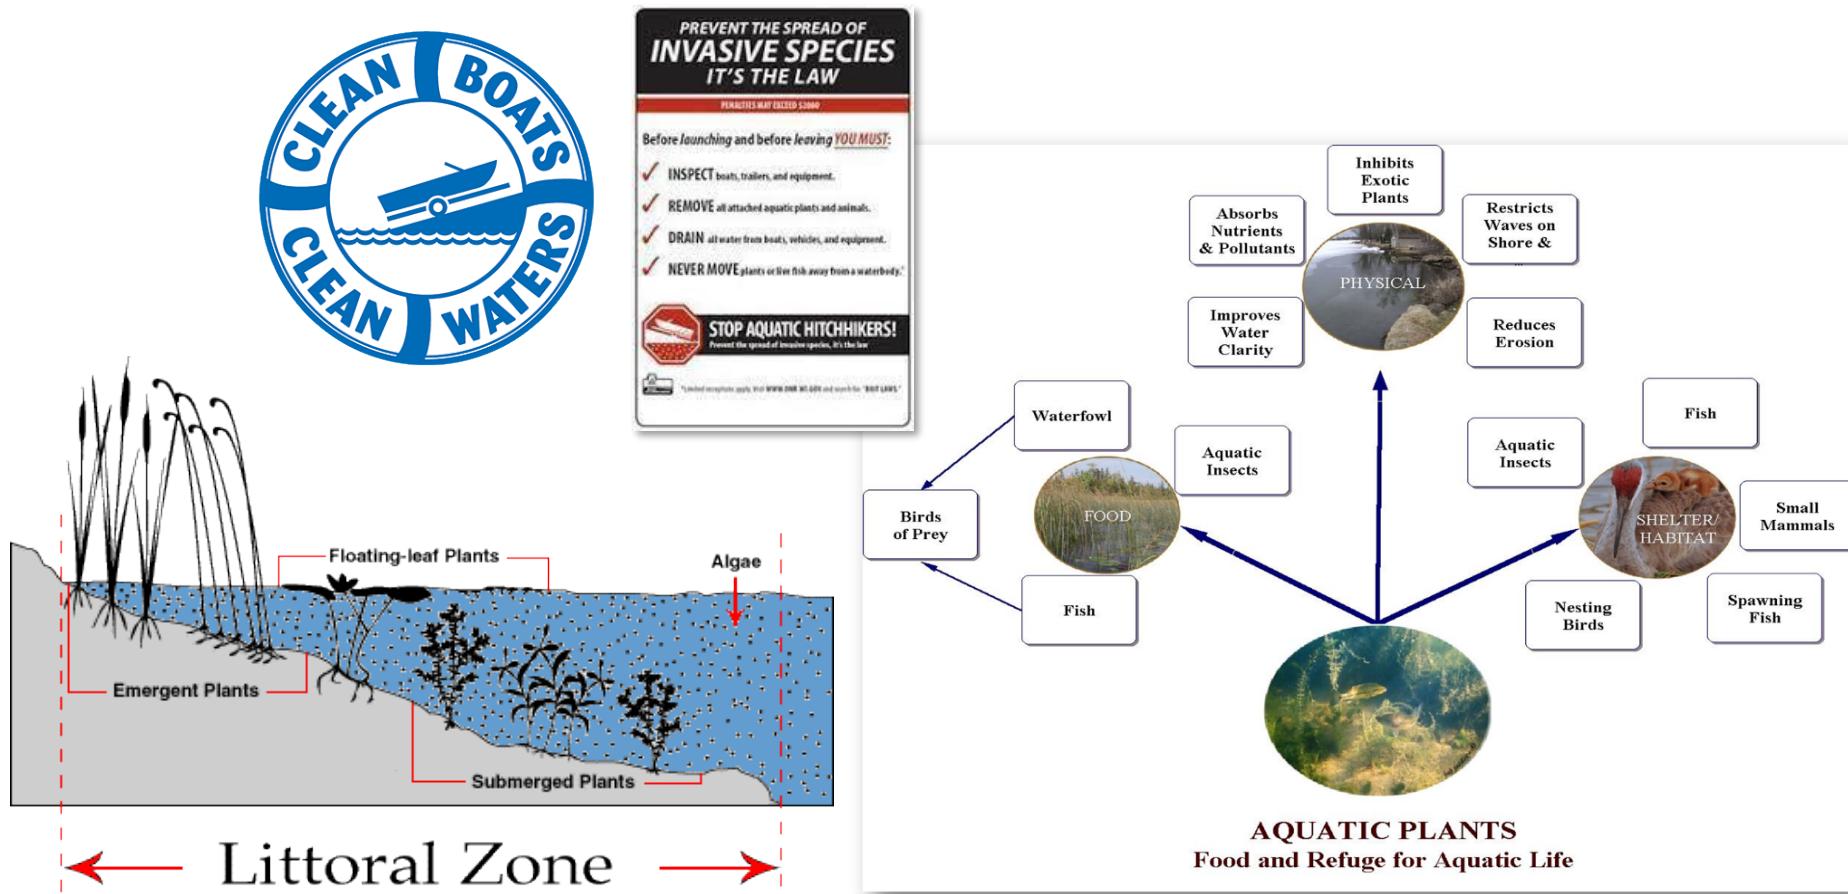

## ***Aquatic Plant Management Plan Review***

A good aquatic plant management plan strategy should reduce the amount of management activity needed as time goes on. In Green Lake, a series of successful strategies (integrated plant management) should lead to a balance between healthy aquatic habitat, water quality, and recreation with minimal annual management.

# Aquatic Plant Community

**Objective 2.2 Protect against establishment of aquatic invasive species.**

| Actions   | Lead person/group | Resources                  | Timeline |
|---|-------------------|----------------------------|----------|
| Encourage or host training to identify and look for invasive species, particularly EWM.   |                   | WDNR-Brenda Nordin<br>LRCD | Ongoing  |
| Identify Clean Boats Clean Waters volunteers or hire someone to staff boat launch on busy days. This can be paid for with a CBCW grant. |                   | CBCW                       | Ongoing  |
| Educate landowners on importance of native aquatic plants for preventing AIS. Host a speaker or mail literature to property owners.     |                   | WDNR-Brenda Nordin         | Ongoing  |
| If new AIS is suspected or observed, follow the guidance in <b>Appendix B</b> .   |                   | WDNR-Brenda Nordin         | Ongoing  |

# Critical Habitat

## Critical Habitat

Special areas harbor habitat that is essential to the health of a lake and its inhabitants. In Wisconsin, critical habitat areas are identified by biologists and other lake professionals from the WDNR in order to protect features that are important to the overall health and integrity of the lake, including aquatic plants and animals. While every lake contains important natural features, not all lakes have official critical habitat designations. Designating areas of the lake as critical habitat enables these areas to be located on maps and information about their importance to be shared. Having a critical habitat designation on a lake can help lake groups and landowners plan waterfront projects that will minimize impact to important habitat, ultimately helping to ensure the long-term health of the lake.

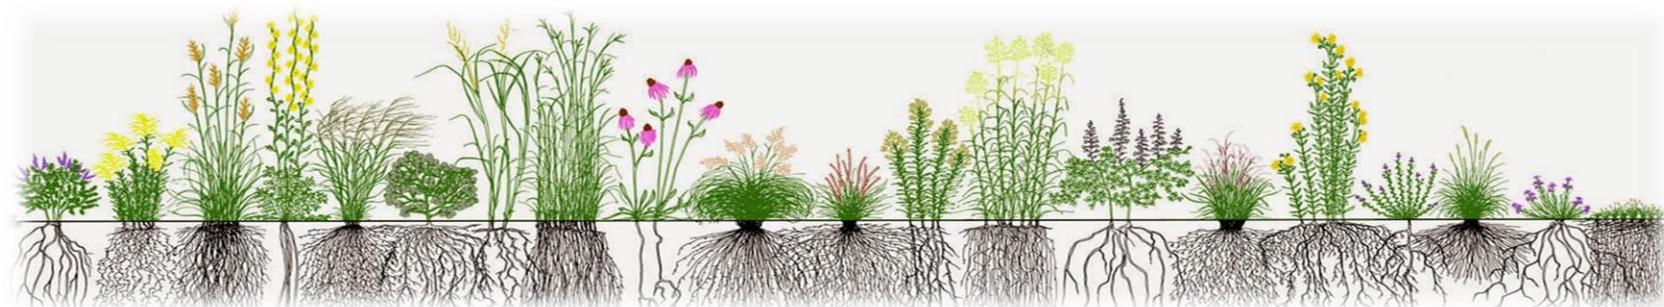

Every waterbody has areas that are most important to the overall health of the lake.

Although Green Lake does not have an official critical habitat area designation, there are areas within Green Lake that are important for fish and wildlife. Natural, minimally-impacted areas with woody habitat such as logs, branches, and stumps; areas with emergent and other forms of aquatic vegetation; areas with overhanging vegetation; and wetlands are elements of good quality habitat. Identifying other important areas around the lake that are important habitat and informing lake users of their value can help raise awareness for the protection of these areas.

### **Goal 3. Sensitive areas in Green Lake, which provide essential habitat and/or water quality benefits, will be protected.**

#### ***Objective 3.1 Identify and inform others of quality habitat areas in and around Green Lake.***

| <b>Actions</b>  | <b>Lead person/group</b> | <b>Resources</b>   | <b>Timeline</b> |
|---|--------------------------|--------------------|-----------------|
| Request a Critical Habitat Designation from WDNR.   |                          | WDNR-Brenda Nordin | 2022            |
| If critical habitat is identified, communicate to property owners, visitors, and Town Board as to why these areas are important. Look for opportunities to protect these areas. |                          |                    | TBD             |

# Watershed

## LANDSCAPES AND THE LAKE

### Green Lake Watershed

#### A Lake is a Reflection of its Watershed...

Understanding where Green Lake's water originates is important to understanding lake health. During snowmelt or rainstorms, water moves across the surface of the landscape (runoff) towards lower elevations such as lakes, streams, and wetlands. This area is called the watershed. Groundwater also feeds Green Lake; its land area may be slightly different than the surface watershed.

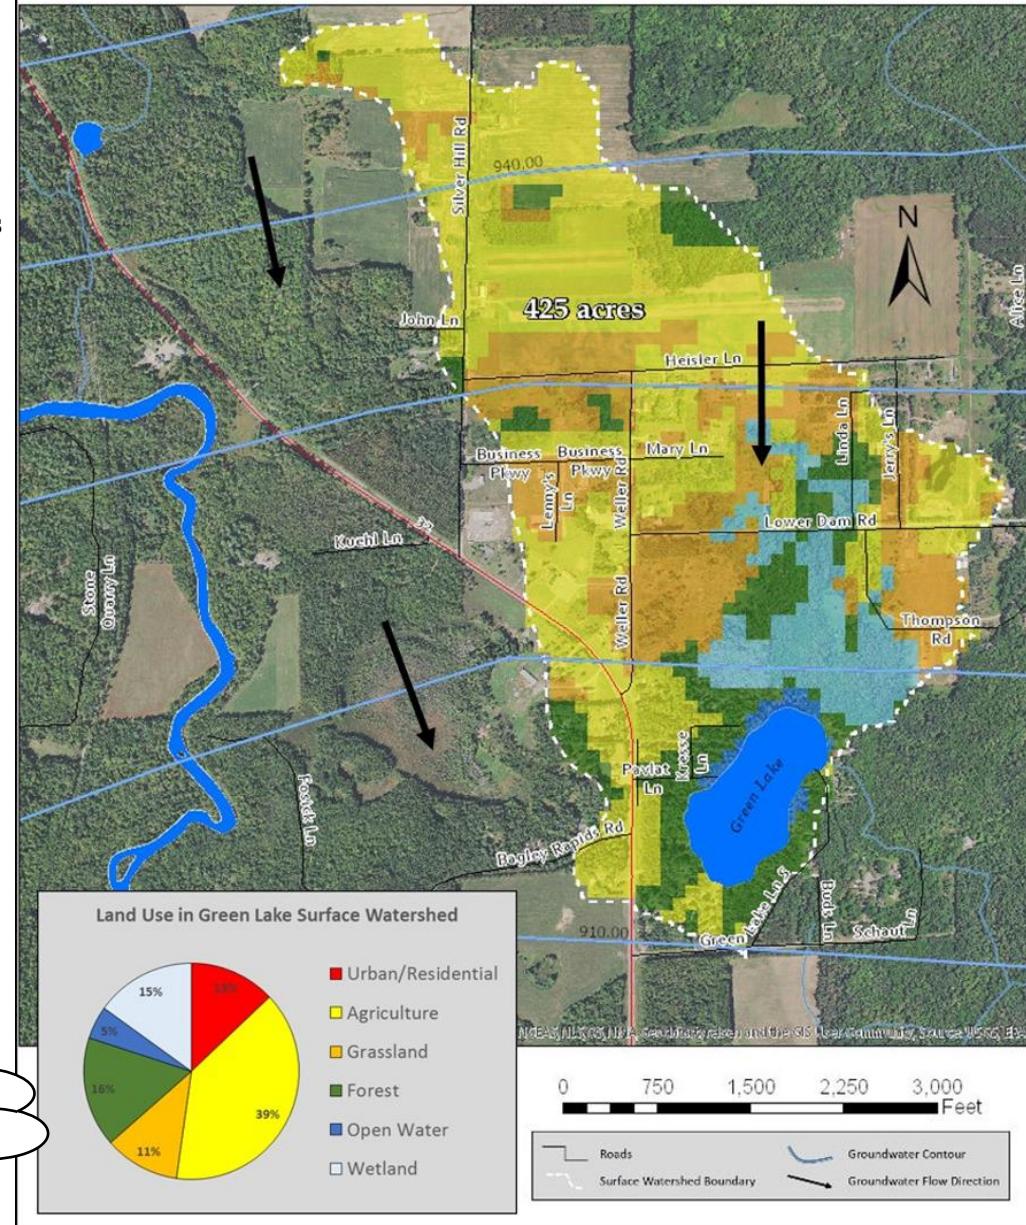

Less runoff is desirable because it allows more water to recharge the groundwater, which feeds the lake year-round - even during dry periods or when the lake is covered with ice. The capacity of the landscape to shed or hold water and contribute or filter particles determines the amount of erosion that may occur, the amount of groundwater feeding a lake, and the lake's water quality and quantity. Landscapes with greater capacities to hold water during rain events and snowmelt slow the delivery of the water to the lake.

#### Green Lake's Watershed

The Green Lake watershed is 425 acres. Primary land use is agriculture, forest and grassland, and residential. The lake's shoreland is surrounded primarily by developed residential lots and forest. In general, the land closest to the lake has the greatest immediate impact on water quality.

 **Watershed: The area of land draining to a lake.**

### Green Lake Surface Watershed & Groundwater Flow

# Watershed

## Why does land matter?

Land use and land management practices within the watershed can affect both its water quantity and quality. While forests, grasslands, and wetlands allow a fair amount of precipitation to soak into the ground, resulting in more groundwater and good water quality, other types of land uses may result in increased runoff and less groundwater recharge, and may also be sources of pollutants that can impact the lake and its inhabitants.

### **Soil and Erosion**

Areas of land with exposed soil can produce soil erosion. Soil entering the lake can make the water cloudy and cover fish spawning beds. Soil also contains nutrients that increase the growth of algae and aquatic plants.

### **Development**

Development on the land may result in changes to natural drainage patterns, alterations to vegetation on the landscape, and may be a source of pollutants. Impervious (hard) surfaces such as roads, rooftops, and compacted soil prevent rainfall from soaking into the ground, which may result in more runoff that carries pollutants to the lake. Wastewater, animal waste, and fertilizers used on lawns, gardens and crops can contribute nutrients that enhance the growth of algae and aquatic plants in our lakes.

### **What can be done?**

Land management practices can be put into place that mimic some of the natural processes, and reduction or elimination of nutrients added to the landscape will help prevent the nutrients from reaching the water. In general, the land nearest the lake has the greatest impact on the lake water quality and habitat and is often the easiest to manage (own property, no politics, etc.).

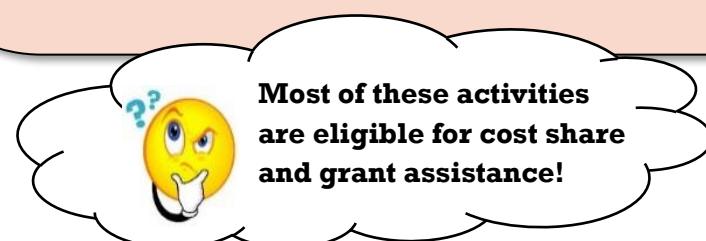

## ***Be Part of the Solution!***

Practices designed to reduce runoff include:

- protecting/restoring wetlands,
- installing rain gardens, swales, rain barrels, and other practices that increase infiltration
- routing drainage from pavement and roofs away from the lake
- meandering lake access paths to minimize direct flow to the lake.

Practices used to help reduce nutrients from moving across the landscape towards the lake include:

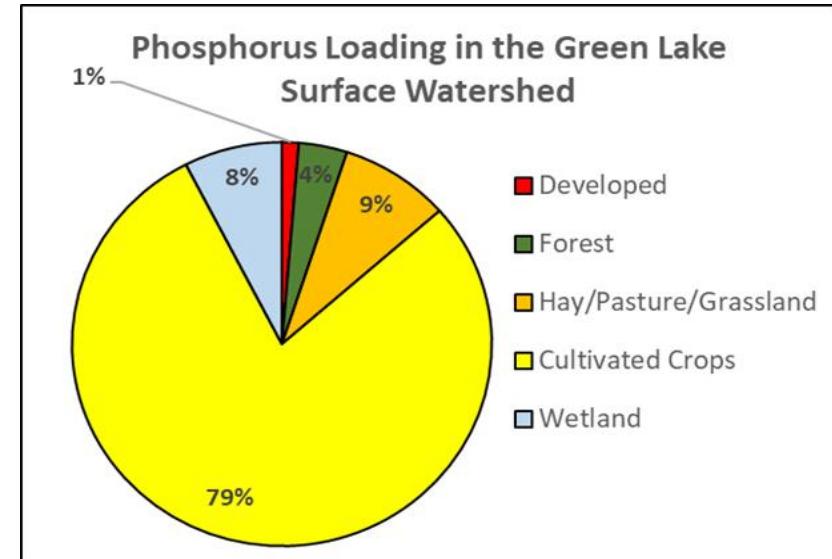

- eliminating/reducing the use of fertilizers,
- increasing the distance between the lake and a septic drainfield,
- protecting/restoring wetlands and native vegetation in the shoreland,
- controlling erosion,
- manure management and cropping practices.

# Watershed

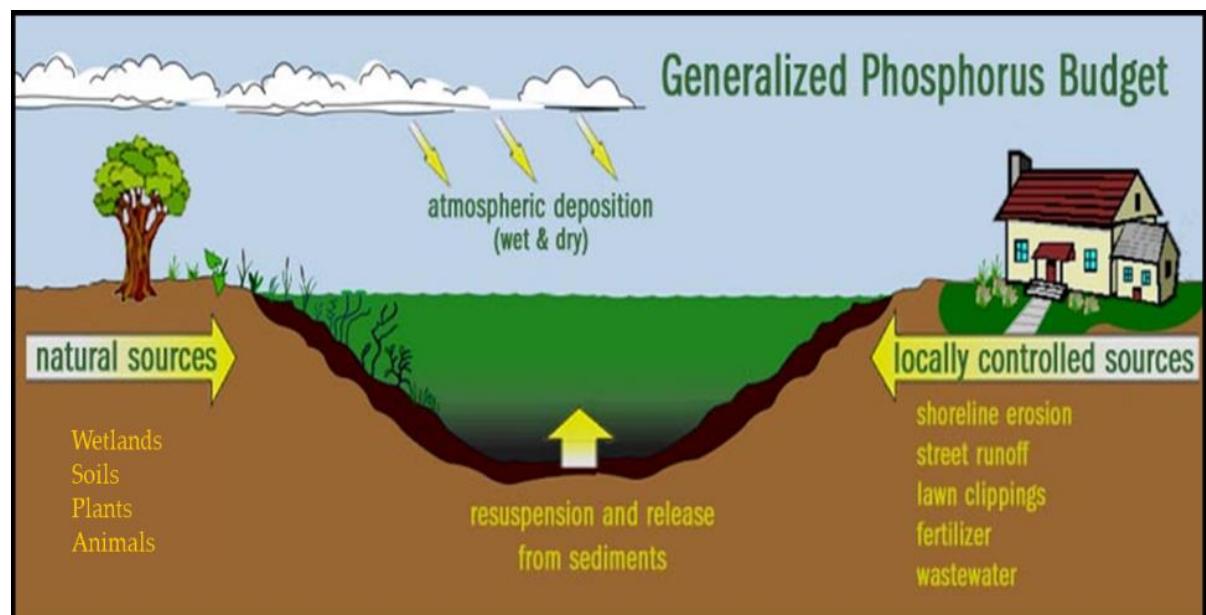

## Phosphorus Modeling

Estimates of phosphorus from the landscape can help to understand the phosphorus sources to Green Lake. Land use in the surface watershed was evaluated and used to populate the Wisconsin Lakes Modeling Suite (WILMS) model. In general, each type of land use contributes different amounts of phosphorus in runoff and groundwater. The types of land management practices that are used and their distances from the lake also affect the contributions to the lake from a parcel of land. The phosphorus contributions by land use category, called phosphorus export coefficients, have been obtained from studies throughout Wisconsin (Panuska and Lillie, 1995). In the Green Lake watershed, the vast majority of these sources are anthropogenic and can be managed.

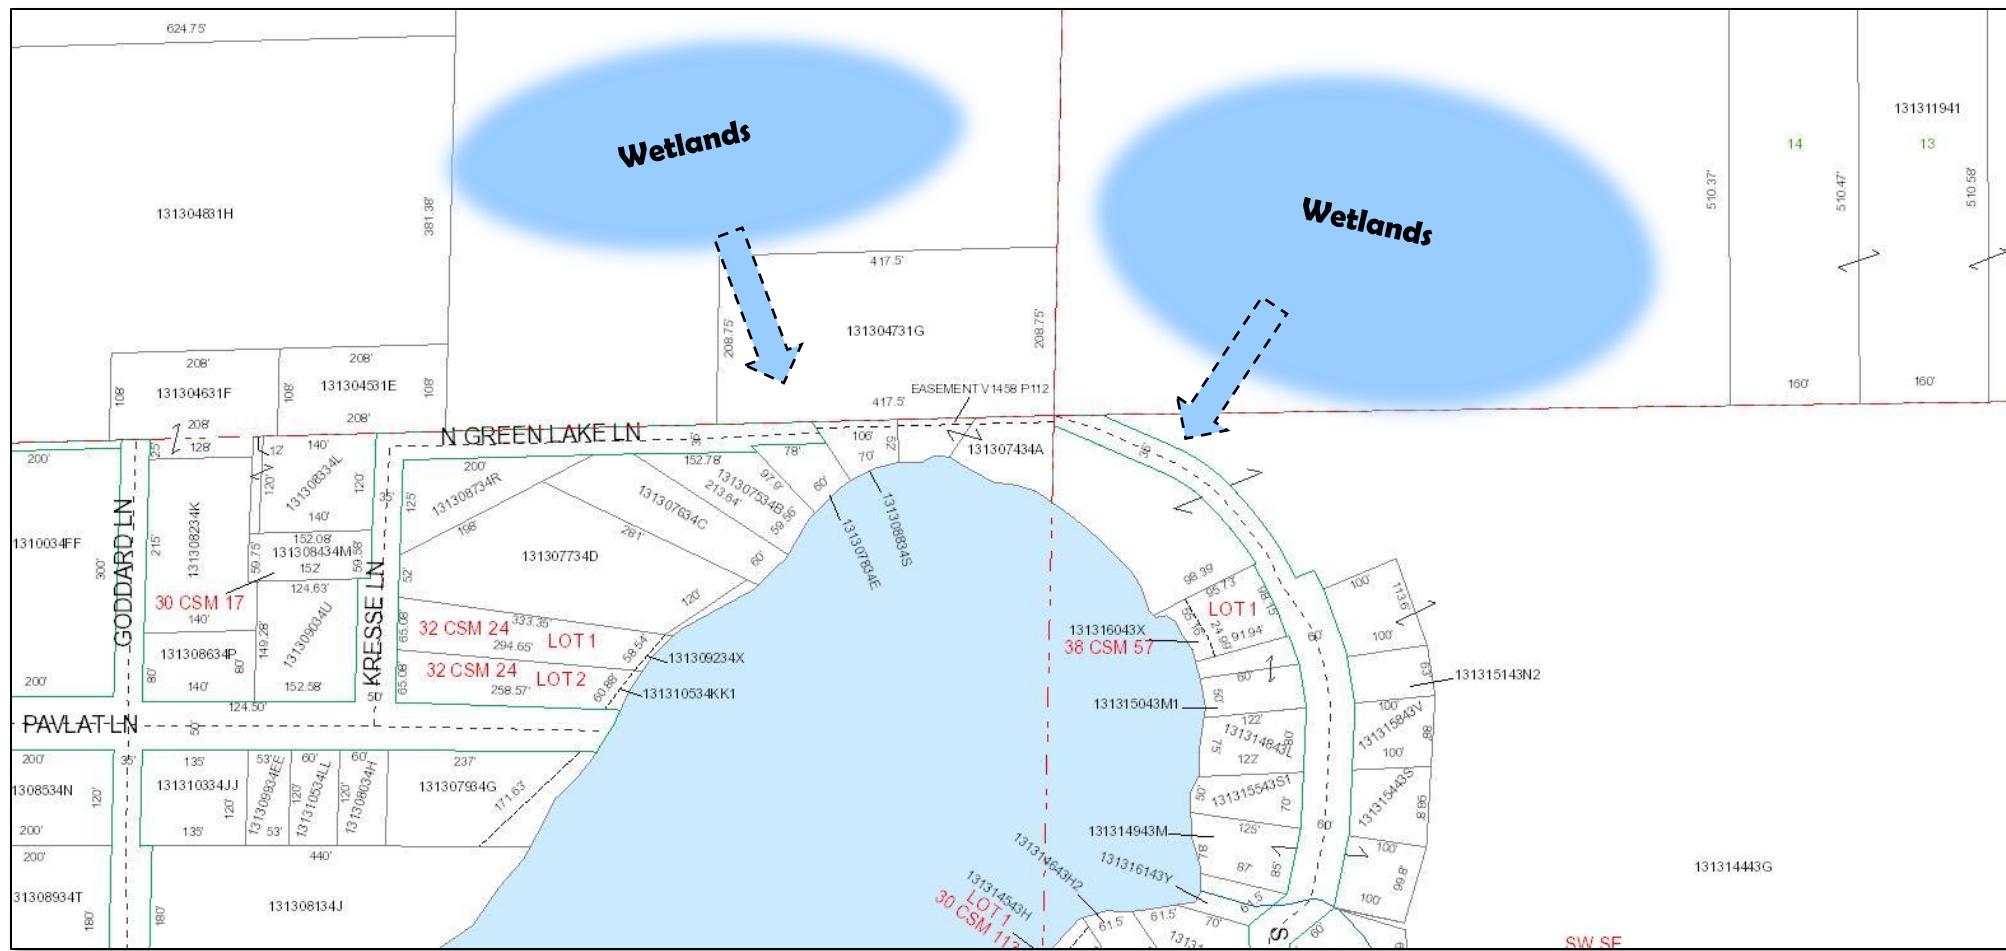

### Phosphorus Loading in Green Lake Watershed

Based on modeling results, agriculture had the greatest percentage of phosphorus contributions from the watershed. Efforts to reduce nutrient inputs to the lake must be focused on land uses that we have some control over such as production and developed areas.

# Watershed

Some have expressed concern that road development for accessing parcels along the north shore of Green Lake, which involved some filling and raising of grade, is impeding water flow into the lake system from the wetland complex to the north. Included in the actions below are to explore and possibly mitigate this impact with the installation of culverts under the road.

# Watershed

**Goal 4. Property owners in the Green Lake watershed will be aware of their connection to the lake and implement healthy land management practices.**

**Objective 4.1 Support healthy land management activities in the Green Lake watershed to reduce sediment and nutrient loading.**

| Actions   | Lead person/group | Resources  | Timeline  |
|---|-------------------|--|-----------|
| Encourage the County to support and follow-up with water quality based best management practices (BMPs) within the lakes watershed. Include BMPs that reduce application of excess nitrogen and pesticides that leach to groundwater. |                   | NRCS<br>DATCP<br>County Board Supervisors                              | Ongoing   |
| Support landowners interested in the protection of their land via a land conservation program (i.e. conservation easement, conservation reserve program, purchase of development rights, or sale of land for protection).             |                   | WDNR Lakes Protection Grant<br>Knowles-Nelson Stewardship Fund<br>NWLT | As needed |
| Encourage any new development to manage runoff on site and consider ways to minimize impacts from septic systems on Green Lake  |                   | Town of Mountain<br>Developers/builders                                | As needed |
| Encourage design of road and construction projects that will minimize impact to lake.   |                   | Town of Mountain<br>OC Highway Dept/WDOT                               | As needed |
| Protect wetlands to maintain the water budget of Green Lake. Any altered wetlands should be mitigated within the lake's watershed.  |                   | WDNR   | As needed |
| Work with USFS to maintain and make improvements to boat launch to reduce erosion and runoff.   |                   | USFS<br>WDNR   | As needed |
| Explore installation of culverts under road(s) on north side of Green Lake to allow for better water movement between wetland complex and lake.   |                   | Town of Mountain<br>WDNR, OCLCD  | 2022      |

Cover crops

Drainage swales

# Shorelands

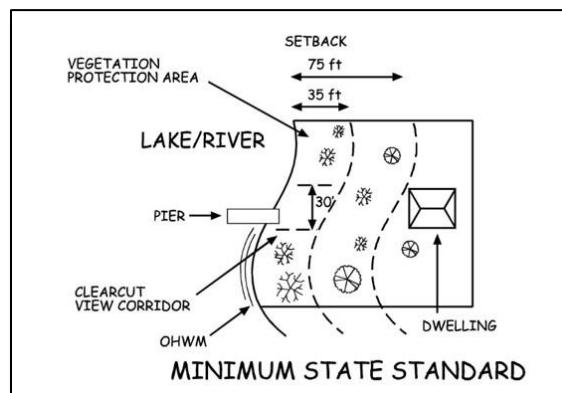

## Shorelands

Shoreland vegetation is critical to a healthy lake ecosystem. It provides habitat for many aquatic and terrestrial animals including birds, frogs, turtles, and small and large mammals. It also helps to improve the quality of the runoff that is flowing across the landscape towards the lake.

**Healthy shoreland vegetation** includes a mix of unmowed grasses/flowers, shrubs, trees, and wetlands which extends at least 35 feet landward from the water's edge.

Shoreland ordinances have been in place since 1964 to improve water quality and habitat, and to protect our lakes. To protect our lakes, county and state (NR 115) shoreland ordinances state that vegetation should extend at least 35 feet inland from the water's edge, with the exception of an optional 30-foot wide view corridor for each shoreland lot. Although some properties were grandfathered in when the ordinance was initiated in 1966, following this guidance will benefit the health of the lake and its inhabitants.

Disturbed shoreland is measured as any shoreline without a shrub or herbaceous layer at the water's edge, regardless of buffer thickness. This may be a result of mowed lawn, artificial beach, etc.

90% of lake life spends all or part of their life in the near shore zone.

## Be Part of the Solution!

### Follow Healthy Shoreland Practices

- **Mow Less:** The simplest, most affordable way to improve your shoreland is to reduce mowing near shore. Native vegetation will re-establish itself over time.
- Leave natural shoreland vegetation in place.
- Restore native shoreland vegetation where it is lacking.
- Plant attractive native species of grasses/flowers, shrubs and trees that will add interest and beauty to your property.
- Don't use fertilizers or herbicides, they may run into the lake. Test your soil to determine if fertilizer is warranted.
- Add or leave woody habitat near the shore. Turtles, birds, and fish love it!
- Never transplant water garden plants or aquarium plants into lakes, streams, or wetlands.
- Visit [www.healthylakeswi.com](http://www.healthylakeswi.com) for additional resources.

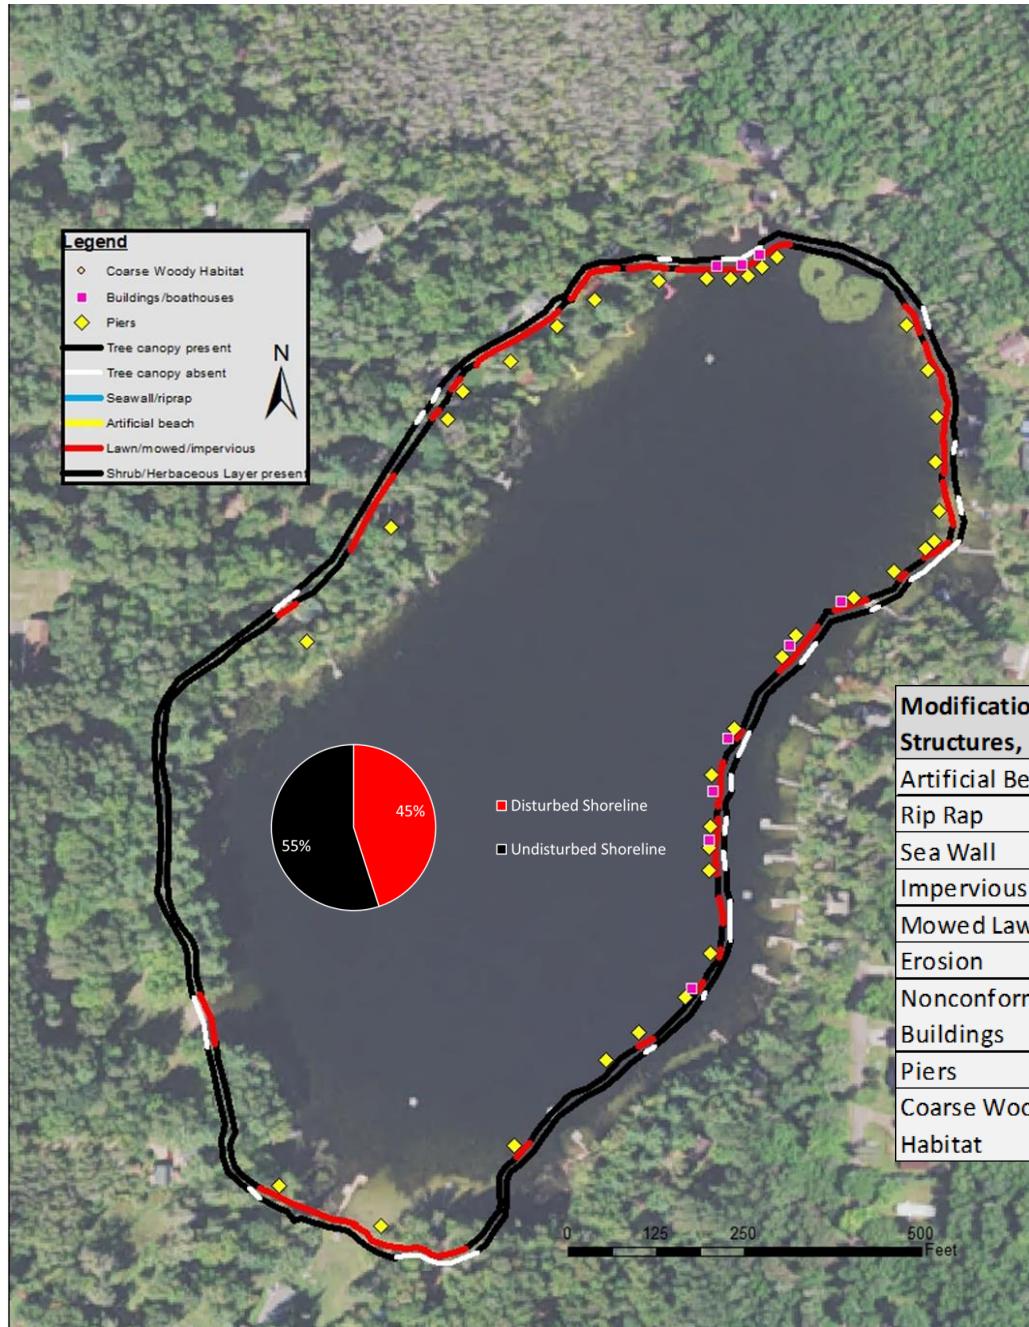

### State Shoreland Zoning Ordinance

#### NR 115 Wisc. Adm. Code for Unincorporated Municipalities

No vegetation within 35 feet of the lake's edge shall be removed except for:

- Up to 30% of shoreline may be removed of shrubs and trees for a view corridor
- A mowed or constructed pedestrian path up to 5 feet wide to access lake

# Shorelands

## Green Lake's Shorelands

To better understand the health of Green Lake, shorelands were evaluated. The survey inventoried shoreland vegetation, erosion, riprap, barren ground, seawalls, structures, and docks. About half of the 1.3 miles of shoreline is developed as homes and seasonal cottages. A total of 36 piers were counted during the survey (1/109 ft).

- With 38 lakefront lots, 1,080 feet (27%) of disturbed shoreland is permitted under NR115. Based on the 2018 shoreland inventory, 45% (1,787 feet) of Green Lake's shoreline was disturbed. Coarse woody habitat was measured at 25 logs/mile (250 logs/mile recommended.)
- Green Lake had slightly below average shoreland health compared to other lakes in the study. Some stretches are in good shape, but many portions have challenges that should be addressed.

# Shorelands

## Coarse Woody Habitat (CWH)

Woody debris (i.e., branches, limbs, trees) that falls into the lake forms critical habitat for tiny aquatic organisms that feed bluegills, turtles, crayfish and other critters. Water insects such as mayflies graze on the algae that grow on decomposing wood. Dragonfly nymphs hunt for prey among the stems and branches. Largemouth and smallmouth bass often find food, shelter, or nesting habitat among these fallen trees.

Above water, a fallen tree is like a dock for wildlife. Ducks and turtles sun themselves on the trunk, muskrats use the tree as a feeding platform, predators such as mink and otter hunt for prey in the vicinity of fallen wood, and dead trees that remain along the shoreline are used as perches by belted kingfishers, ospreys and songbirds.

Undeveloped lakes typically contain hundreds of 'logs per mile' while they may completely disappear on developed lakes. Unless it is a hazard to navigation or swimming, consider leaving woody debris in the water.

# Shorelands

## Green Lake 2018 Shoreland Survey Results

| Total lakefront footage | # Riparian lots | Total allowable (NR115) disturbed shoreland | Measured disturbed shoreland |
|-------------------------|-----------------|---|------------------------------|
| 3,933                   | 38              | 1,080 feet (27%)                            | 1,787 feet (45%)             |

**Goal 5. Shorelands around Green Lake will be healthy and protective of water quality and habitat. Over the next 5 years, at least 500 feet of mowed shoreline (at least 7-10 properties) will be restored.**

***Objective 5.1 Shoreland property owners will be knowledgeable and make good decisions regarding shoreland management practices.***

| Actions  | Lead person/group | Resources  | Timeline |
|--|-------------------|--|----------|
| Provide informational materials to all shoreland property owners about basic lake stewardship including healthy shorelands and their composition (wildflowers, native plants, coarse woody habitat). Include information on cost share programs. |                   | OCLWA<br>UWEX Lakes<br>WDNR Healthy Lakes Grants | Ongoing  |
| Encourage and support shoreland owners interested in shoreland restoration. Include information on how and why to create healthy shorelands in a welcome packet to new property owners.  |                   | UWEX Lakes<br>OCLCD<br>WDNR Healthy Lakes Grants | Ongoing  |
| Encourage those interested in shoreland restoration to contact OCLCD for available resources.  |                   | OCLCD<br>WDNR Healthy Lakes Grants               | Ongoing  |
| Consider restoring and showcasing a 'demonstration site' with a sign about shoreland protection.   |                   | WDNR   | 2022     |
| Identify property owners to install fish sticks to improve fish habitat (see <b>Fish Community</b> section).   |                   | WDNR-Chip Long                                   | 2022     |

# Water Quality

## Water Quality

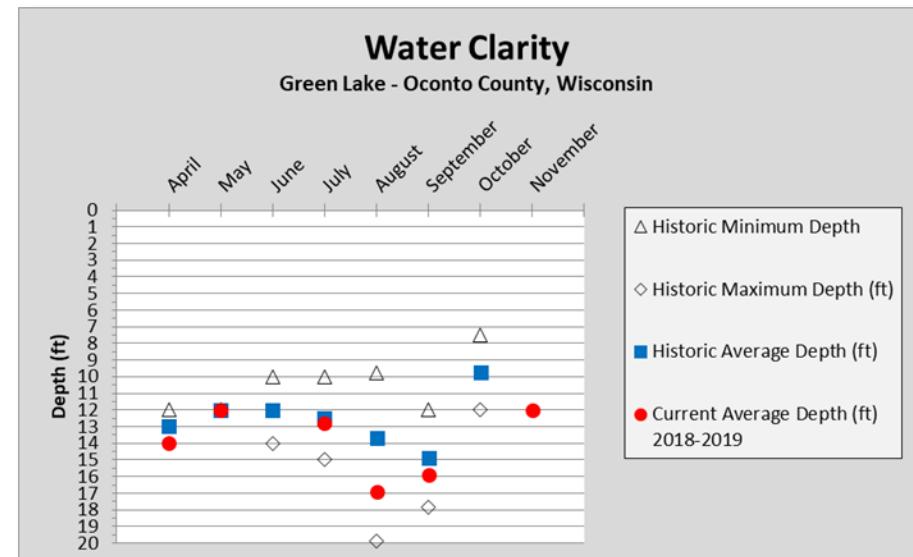

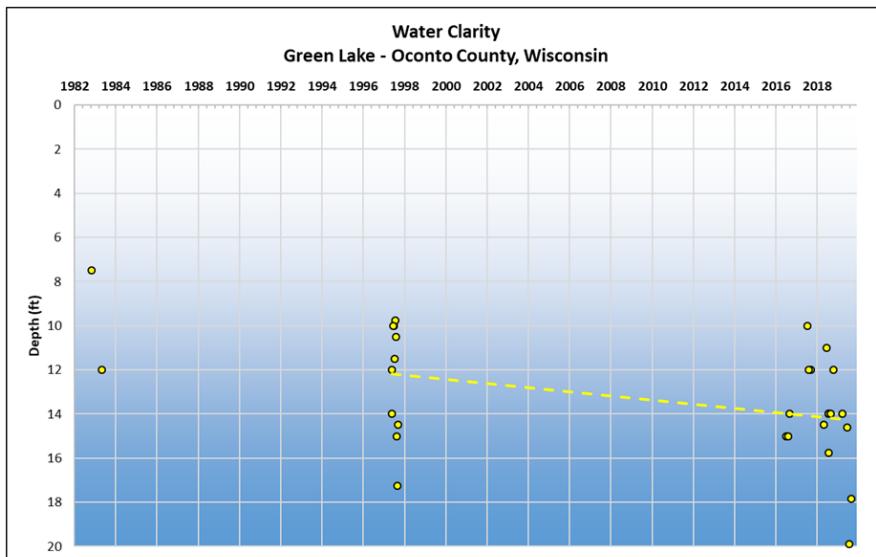

A variety of water chemistry measurements were used to characterize the water quality in Green Lake. Water quality was assessed during the 2018-2019 lake study and involved a number of measures including temperature, dissolved oxygen, water chemistry, and nutrients (phosphorus and nitrogen). Nutrients are important measures of water quality in lakes because they contribute to algae and aquatic plant growth. Each of these interrelated measures plays a part in the lake's overall water quality. In addition, water quality data collected in past years was also reviewed to determine trends in Green Lake's water quality.

## Water Clarity

Water clarity is a measure of how deep light can penetrate (Secchi depth). Clarity is affected by water color, turbidity, and algae and helps determine where rooted aquatic plants grow.

### Green Lake's Water Quality Summary

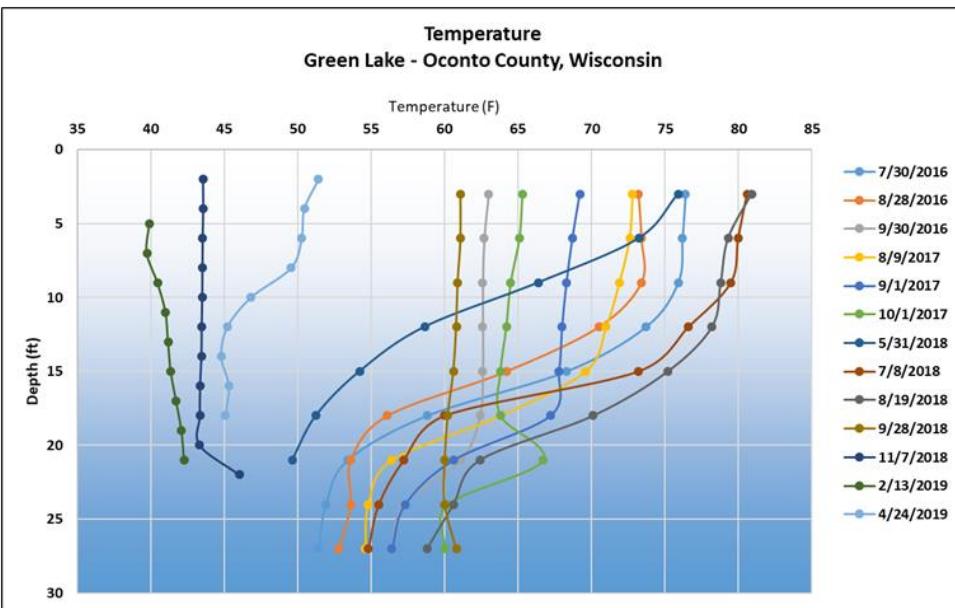

- ✓ **Water clarity** ranged from 11-20 feet (considered very good), which is slightly better than historic measurements and suggests an improving trend.
- ✓ Sufficient **dissolved oxygen** was present in at least the upper 5 feet of water at all times during the study.
- ✓ Concentrations of **contaminants** were elevated during the study. Atrazine was not detected.
- ✓ **Phosphorus** concentrations remained below the standard of 40 ug/L throughout the study. Inorganic nitrogen remained well below concentrations that spur algal blooms.
- ✓ Water in Green Lake is **hard** (145 mg/L CaCO<sub>3</sub>), having an elevated level of dissolved minerals. This calcium-rich water helps buffer the impacts of phosphorus.

# Water Quality

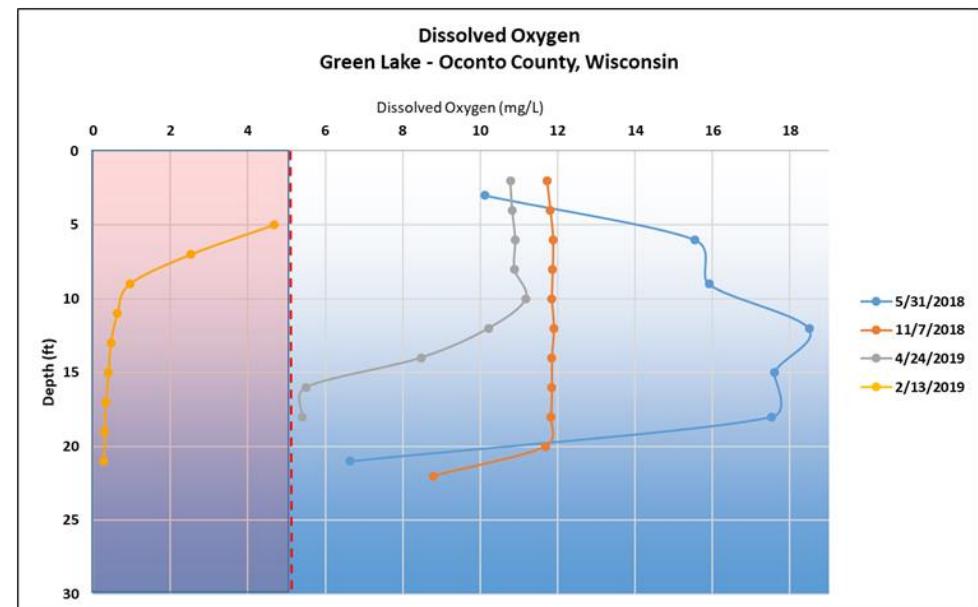

## Temperature and Dissolved oxygen

Temperature profiles for Green Lake show a thermocline at depth between 15 and 20 feet during most of the growing season. This phenomenon separates warmer water nearer the surface from colder, groundwater-fed water at depth. In the spring and fall,

temperatures at depth and near the surface become similar, allowing all the water within the lake to mix. Dissolved oxygen is an important measure in Green Lake because a majority of organisms in the water depend on oxygen to survive. Oxygen is dissolved into the water from contact with air, which is increased by wind and wave action. Algae and aquatic plants also produce oxygen when sunlight enters the water, but the decomposition of dead plants and algae reduces oxygen in the lake.

Dissolved oxygen concentrations decline with depth as access to sources such as the atmosphere and growing plants is decreased. Oxygen levels in Green Lake are typically sufficient to support

fish through most of the year, but a late winter profile shows that concentrations are very low and winter fish kills are possible. Some bumps in concentrations at depth, around 10-20 feet, suggest some algal activity.

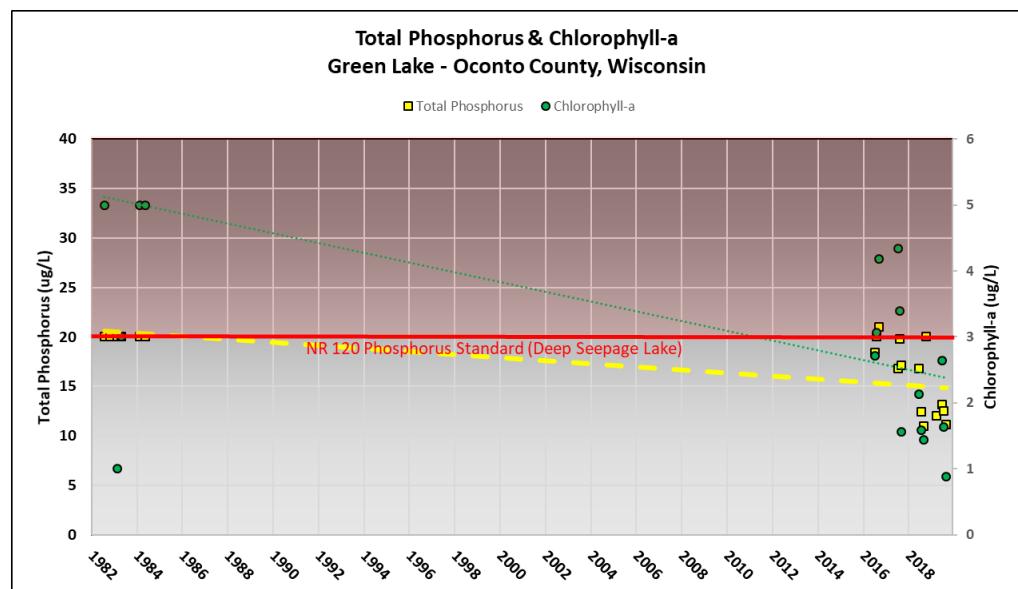

## Contaminants

Chloride, sodium and potassium concentrations are commonly used as indicators of how a lake is being impacted by human activity. The presence of these compounds where they do not naturally occur indicates sources of water contaminants. Although these elements are not detrimental to the aquatic ecosystem, they indicate that sources of contaminants such as road salt, fertilizer, animal waste and/or septic system effluent may be entering the lake from either surface runoff or via groundwater. Measurements of potassium were low, but chloride and sodium were quite high which suggests the lake is being impacted by human activity.

# Water Quality

## Nutrients

Phosphorus is an element that is essential in trace amounts to most living organisms, including aquatic plants and algae. Naturally-occurring sources of phosphorus include soils and wetlands, and groundwater. Common sources from human activities include soil erosion, animal waste, fertilizers, and septic systems. Although a variety of compounds are important to biological growth, phosphorus receives so much attention because it is commonly the “limiting nutrient” in many Wisconsin lakes. Due to its relatively short supply compared to other substances necessary for growth, relatively small increases in phosphorus result in significant increases in aquatic plants and algae. NR 120, Wisconsin Administrative Code lists phosphorus limits for different lake types. Deep seepage lakes such as Green have a standard of 20 ug/L they must remain stay to remain healthy. The very limited data available show concentrations in Green to be well below this standard. Continued monitoring is necessary to verify this and establish trends. Concentrations of 0.3 mg/L inorganic nitrogen in spring are sufficient to fuel algal blooms throughout the summer. Sources of inorganic nitrogen include animal waste, septic systems/waste treatment effluent, and fertilizers.

In Green Lake, phosphorus concentrations were periodically above the threshold of 20 ug/L, but chlorophyll-a remained below its threshold of 6 ug/L throughout the study. Compared to limited data from the late 1970s, a decreasing trend in concentrations is suggested. Continued monitoring is recommended.

## *Be part of the solution!*

Managing nitrogen, phosphorus and soil erosion throughout the Green Lake watershed is one of the keys to protecting the lake itself. Near shore activities that may increase the input of phosphorus to the lake include applying fertilizer, removing native vegetation (trees, bushes and grasses), mowing vegetation, and increasing the amount of exposed soil. Nitrogen inputs to a lake can be controlled by using lake-friendly land management decisions, such as the restoration of shoreland vegetation, elimination/reduction of fertilizers, proper management of animal waste and septic systems, and the use of water quality-based management practices.

# Water Quality

## Goal 6. Maintain or improve water quality in Green Lake.

**Objective 6.1** *Maintain median summer total phosphorus concentrations below 20 ug/L and fall inorganic nitrogen concentrations below 0.3 mg/L.*

| Actions   | Lead person/group | Resources                   | Timeline |
|---|-------------------|-----------------------------|----------|
| Inform others around the lake about the impact of nutrients and land management on water quality through the distribution of a newsletter and/or hosting a guest speaker. |                   | OCLWA<br>WDNR<br>UWEX Lakes | Ongoing  |
| Refrain from the use of fertilizers. Encourage soil testing to determine if amendments are necessary.   |                   | OC UWEX                     | Ongoing  |
| Encourage the restoration of unmowed vegetation to slow and absorb runoff and pollutants (see <b>Shorelands</b> section).   |                   | UWEX Lakes                  | Ongoing  |

**Objective 6.2** *Continue to develop an ongoing, long-term dataset for Green Lake to monitor trends or changes over time.*

| Actions  | Lead person/group | Resources                  | Timeline                    |
|--|-------------------|----------------------------|-----------------------------|
| Support volunteers collecting water quality data. Encourage new volunteers to work with current volunteers in the Citizen Lake Monitoring Network. |                   | CLMN<br>WDNR-Brenda Nordin | 3+ times annually in summer |
| Submit all data to WDNR for archival and use by scientists and resource managers.  |                   | WDNR                       | Ongoing                     |

# Recreation

Wisconsin has more than 500,000 registered boats—one for every 10 residents.

## PEOPLE AND THE LAKE

The people who interact with the lake are a key component of the lake and its management. In essence a lake management plan is a venue by which people decide how they would like people to positively impact the lake. The plan summarizes the decisions of the people to take proactive steps to improve their lake and their community. Individual decisions by lake residents and visitors can have positive impacts on the lake and on those who enjoy this common resource. Collaborative efforts may have bigger positive impacts; therefore, communication and cooperation between the community and suite of lake users are essential to maximize the effects of plan implementation.

### Goal 7. Lake users will be informed about and respectful of Green Lake.

#### Objective 7.1 Promote an atmosphere of respect amongst lake users.

| Actions   | Lead person/group | Resources                            | Timeline |
|---|-------------------|--------------------------------------|----------|
| Work with other lake groups and towns to support a recreational officer and municipal court for enforcement of regulations, including 'No Wake' and safe boat operation.  |                   | Town of Mountain<br>OCLWA<br>OC UWEX | Ongoing  |
| Work with USFS to upkeep/repair boat ramp, as appropriate. Boat ramps in disrepair can be unhealthy to the lake if it results in spinning tires, power loading, etc. A well-kept boat launch also sends a message to visitors about the attention and care a lake is receiving. |                   | USFS<br>WDNR                         | Ongoing  |
| Update signage at boat launch with an interpretive kiosk.   |                   | UWEX Lakes                           | TBD      |

# Communication & Organization

## Communication and Organization

Working together on common values will help to achieve the goals outlined in this plan. This will involve communication between individuals, the Town of Mountain, Oconto County, resource managers, and elected officials. In addition, staying informed about lake- and groundwater-related topics will be essential to achieving the goals laid out in this plan. See the Oconto County Lake Information Directory in the Appendices for contact information.

### Goal 8. Increase participation in lake stewardship.

#### *Objective 8.1 Develop opportunities and incentives for active participation in the management of Green Lake.*

| <b>Actions</b>   | <b>Lead person/group</b> | <b>Resources</b>       | <b>Timeline</b> |
|--|--------------------------|------------------------|-----------------|
| Maintain a website or Facebook page to provide a commons source of communication.  |                          | LakeKit.net<br>OC UWEX | Ongoing         |
| Maintain an email list of shoreland property owners and others interested in Green Lake.   |                          | OC UWEX                | Ongoing         |
| Distribute welcome packet/mailing to all new shoreland property owners with basic lake stewardship information.                            |                          | OCLWA<br>UWEX Lakes    | As needed       |
| Communicate updates to lake management plan and management activities to residents and users of the lake via email list and/or newsletter. |                          |                        | As needed       |
| Host gatherings to learn about topics identified in this plan. Invite speakers or conduct demonstrations.                                  |                          | UWEX Lakes<br>WDNR     | Ongoing         |

#### *Objective 8.2. Organize stewards of Green Lake to maximize and access resources. Communicate with municipalities, agencies and organizations to leverage resources and opportunities.*

| <b>Actions</b>   | <b>Lead person/group</b> | <b>Resources</b> | <b>Timeline</b> |
|--|--------------------------|------------------|-----------------|
| Revitalize the Green Lake Association and recruit members. Register the organization with UWEX Lakes and WDNR. | Interested citizens      | UWEX Lakes       | Ongoing         |
| Network with other lake groups by having Green Lake represented at OCLWA.                                      |                          | OCLWA            |                 |
| Attend Wisconsin Lakes Convention or Lake Leaders Institute.   |                          | UWEX Lakes       | April           |

LakeKit.net is a network of lake groups helping others to build and maintain websites.

Many of the goals outlined in this plan focus on distributing information to lake and watershed residents and lake users in order to help them make informed decisions that will result in a healthy Green Lake ecosystem that is enjoyed by many people. Working together on common values will help to achieve the goals that are outlined in this plan.

# Updates and Revisions

## Updates and Revisions

A management plan is a living document that changes over time to meet the current needs, challenges and desires of the lake and its community. The goals, objectives and actions listed in this plan should be reviewed annually and updated with any necessary

changes. Partners listed in the plan should be contacted annually, and updated information complied. A list of changes/updates to the plan should be documented. To ensure that everyone is informed about changes, appropriate approval for changes should be acquired by all partners signing on to this plan.

## Goal 9. Review plan regularly and update as needed.

### *Objective 9.1 Communicate updates with lake community, Oconto County and WDNR.*

| Actions   | Lead person/group | Resources                     | Timeline |
|---|-------------------|-------------------------------|----------|
| Review plan regularly (annually) and discuss/document accomplishments and identification of goals/objectives for coming year. |                   |                               | Annually |
| Formally update this plan every 5 years.  |                   | OC UWEX<br>UWEX Lakes<br>WDNR | 2026     |

## Appendix B. Rapid Response Plan

### REPORTING A SUSPECTED INVASIVE SPECIES

#### **1. Collect specimens or take photos.**

Regardless of the method used, provide as much information as possible. Try to include flowers, seeds or fruit, buds, full leaves, stems, roots and other distinctive features. In photos, place a coin, pencil or ruler for scale. Deliver or send specimen ASAP.

Collect, press and dry a complete sample. This method is best because a plant expert can then examine the specimen.

**-OR-**

Collect a fresh sample. Enclose in a plastic bag with a moist paper towel and refrigerate.

**-OR-**

Take detailed photos (digital or film).

#### **2. Note the location where the specimen was found.**

If possible, give the exact geographic location using a GPS (global positioning system) unit, topographic map, or the Wisconsin Gazetteer map book. If using a map, include a photocopy with a dot showing the plant's location.

Provide one or more of the following:

- Latitude & Longitude
- UTM (Universal Transverse Mercator) coordinates
- County, Township, Range, Section, Part-section

- Precise written site description, noting nearest city & road names, landmarks, local topography

#### **3. Gather information to aid in positive species identification.**

- Collection date and county
- Your name, address, phone, email
- Exact location (lat/long or UTM, Township/Range)
- Plant name
- Land ownership (if known/applicable)
- Population description (estimated # plants, area covered)
- Habitat type where found (forest, field, prairie, wetland, open water)

# Appendix B

4. Mail or bring specimens and information to any of the following locations (digital photos may be emailed):

**Wisconsin Dept. Natural Resources**

2984 Shawano Avenue,  
Green Bay, WI 54313  
Phone: (920) 662-5100

# Appendix C

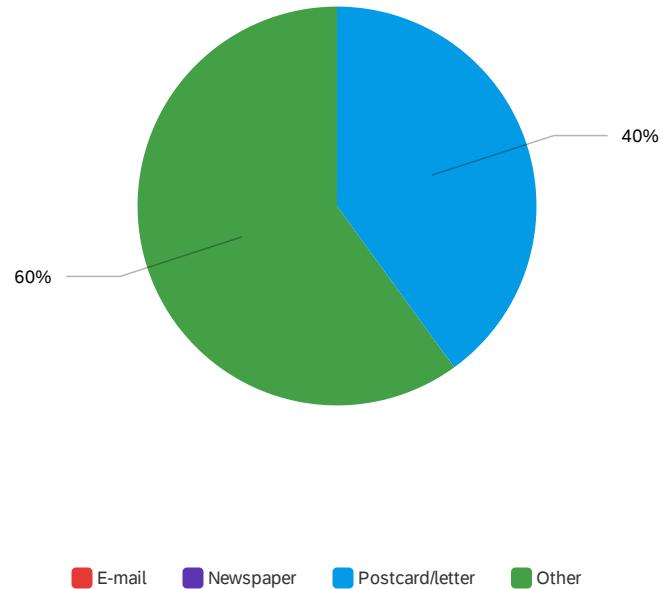

## **Appendix C. Lake User Survey Results**

# Default Report

Green Lake Survey - Oconto County Lakes Project

March 24, 2021 11:44 AM MDT

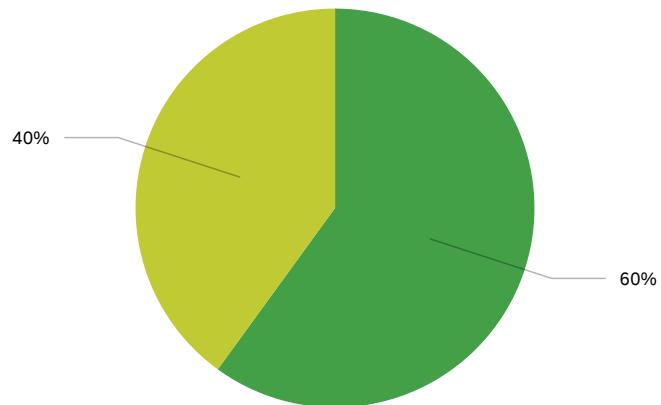

## Q2 - How did you hear about this survey?

| # | Field           | Choice Count |
|---|-----------------|--------------|
| 1 | E-mail          | 0% 0         |
| 2 | Newspaper       | 0% 0         |
| 3 | Postcard/letter | 40% 2        |
| 4 | Other           | 60% 3        |
|   |                 | 5            |

Showing rows 1 - 5 of 5

### Q3 - Do you own or rent property...

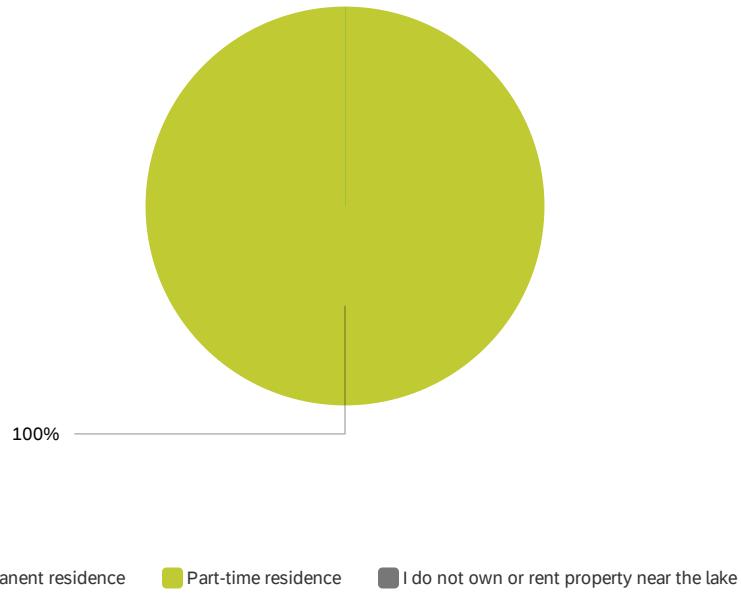

■ Around the lake ■ Less than 1/2 mile from the lake ■ Near the lake, but more than 1/2 mile away ■ I do not own or rent property near the lake

| # | Field                                       | Choice | Count |
|---|---|--------|-------|
| 1 | Around the lake                             | 60%    | 3     |
| 2 | Less than 1/2 mile from the lake            | 40%    | 2     |
| 3 | Near the lake, but more than 1/2 mile away  | 0%     | 0     |
| 4 | I do not own or rent property near the lake | 0%     | 0     |
|   |   |        | 5     |

Showing rows 1 - 5 of 5

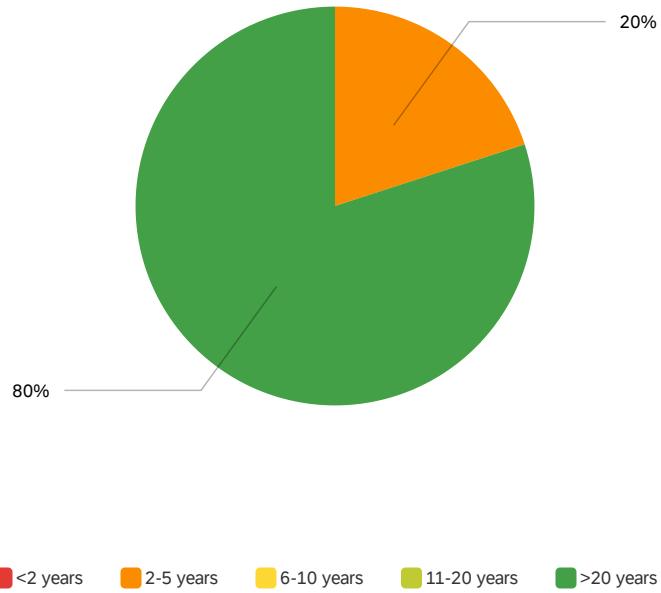

Q4 - If you own or rent property near the lake, is this property your...

| # | Field                                       | Choice Count |
|---|---|--------------|
| 1 | Permanent residence                         | 0% 0         |
| 2 | Part-time residence                         | 100% 5       |
| 3 | I do not own or rent property near the lake | 0% 0         |
|   |   | 5            |

Showing rows 1 - 4 of 4

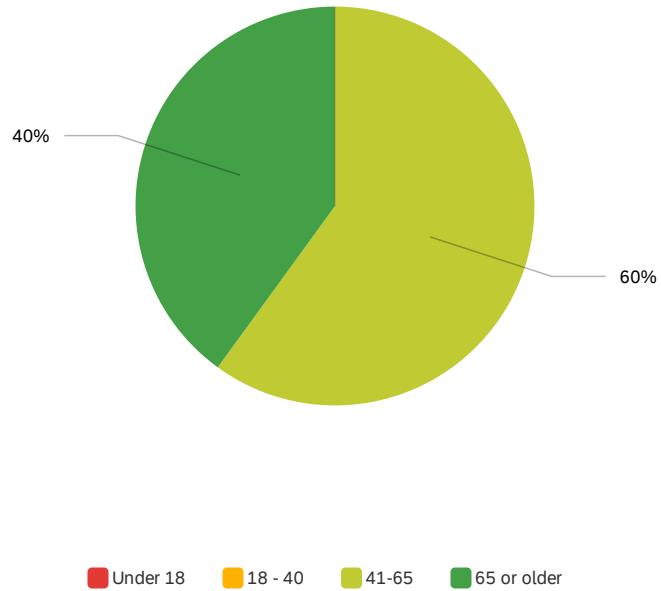

## Q5 - How long have you lived on, visited or recreated on the lake?

| # | Field       | Choice | Count |
|---|-------------|--------|-------|
| 1 | <2 years    | 0%     | 0     |
| 2 | 2-5 years   | 20%    | 1     |
| 3 | 6-10 years  | 0%     | 0     |
| 4 | 11-20 years | 0%     | 0     |
| 5 | >20 years   | 80%    | 4     |
|   |             |        | 5     |

Showing rows 1 - 6 of 6

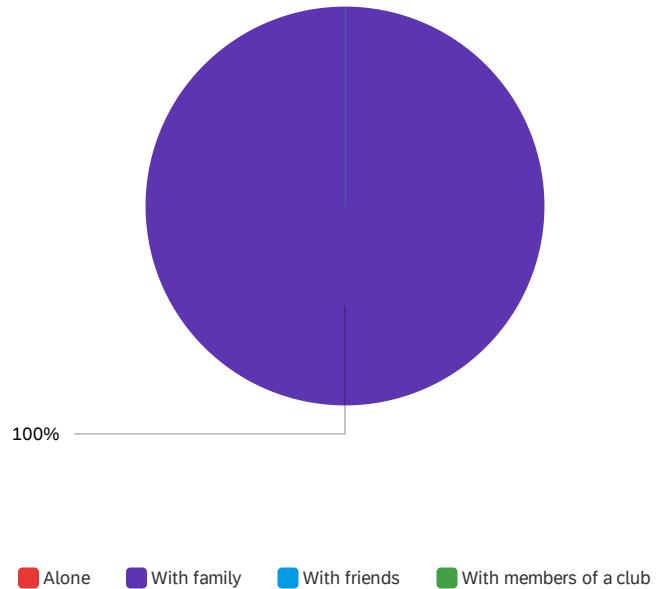

## Q8 - Which category below includes your age?

| # | Field       | Choice Count |
|---|-------------|--------------|
| 1 | Under 18    | 0% 0         |

## Q11 - What do you value most about Green Lake?

What do you value most about Green Lake?

Our family long history on the lake, appearance of the lake, clean water

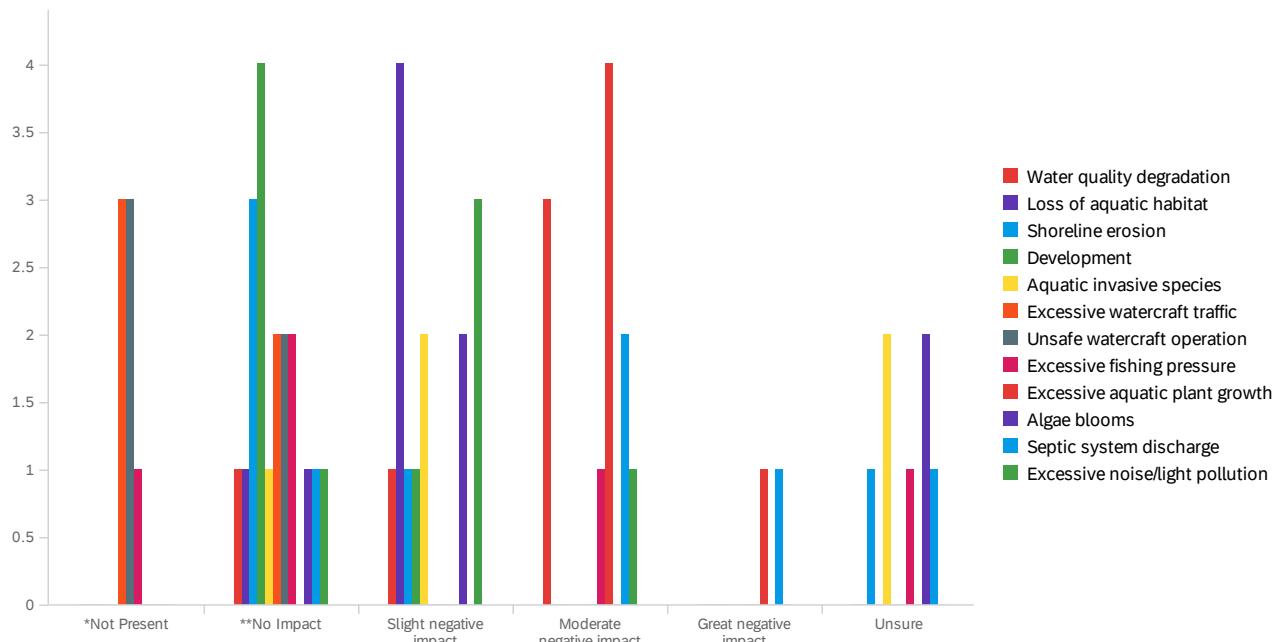

water

Recreation - fishing, swimming, canoeing, etc.

Small, no wake lake is awesome. Water quality/ clarity seems to be good. Generally quiet. Mostly nice gravel lake bottom is great for swimming.

not sure

Q42 - Below is a list of negative impacts commonly found in Wisconsin lakes. To what level do you believe each of the following factors may be impacting Green Lake? \*Not Present means that you believe the issue does not exist on Green Lake\*\*No Impact means that the issue may exist, but is not negatively impacting Green Lake

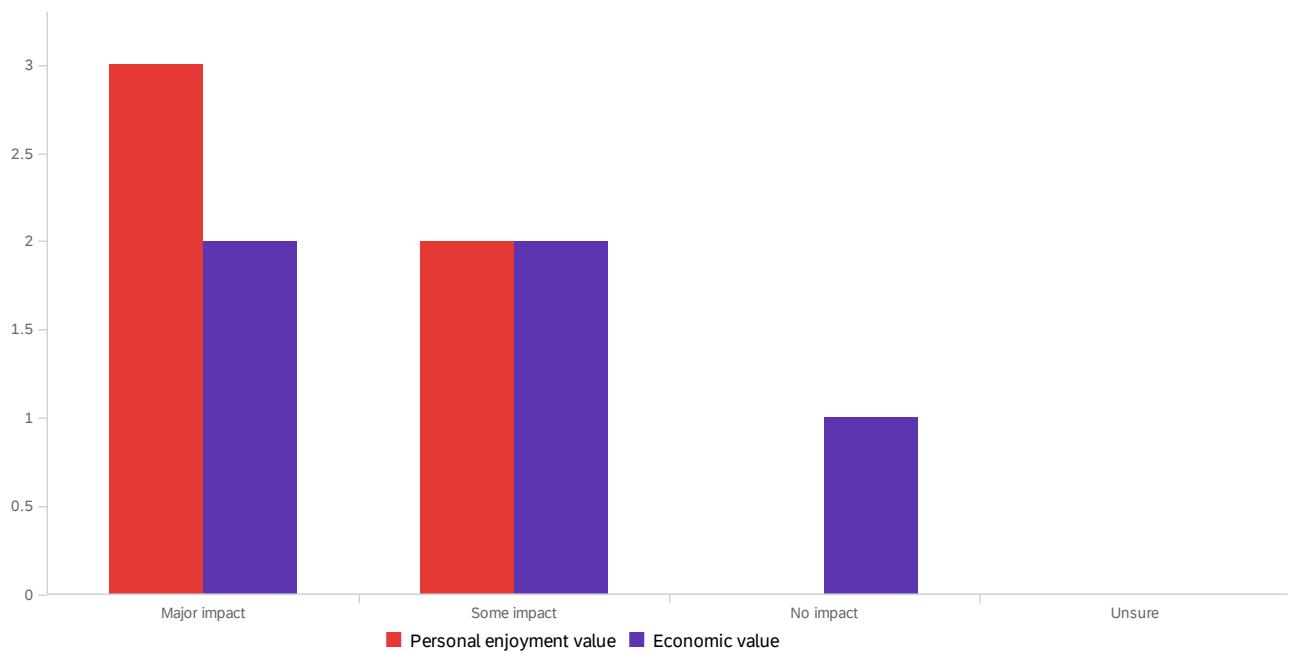

| # | Field                        | *Not Present | **No Impact | Slight negative impact | Moderate negative impact | Great negative impact | Unsure | Total |

## Q12 - In your opinion, what should be done to restore, maintain or improve Green Lake?

In your opinion, what should be done to restore, maintain or improve Green...

Control the water shed area and lake shore habitat.

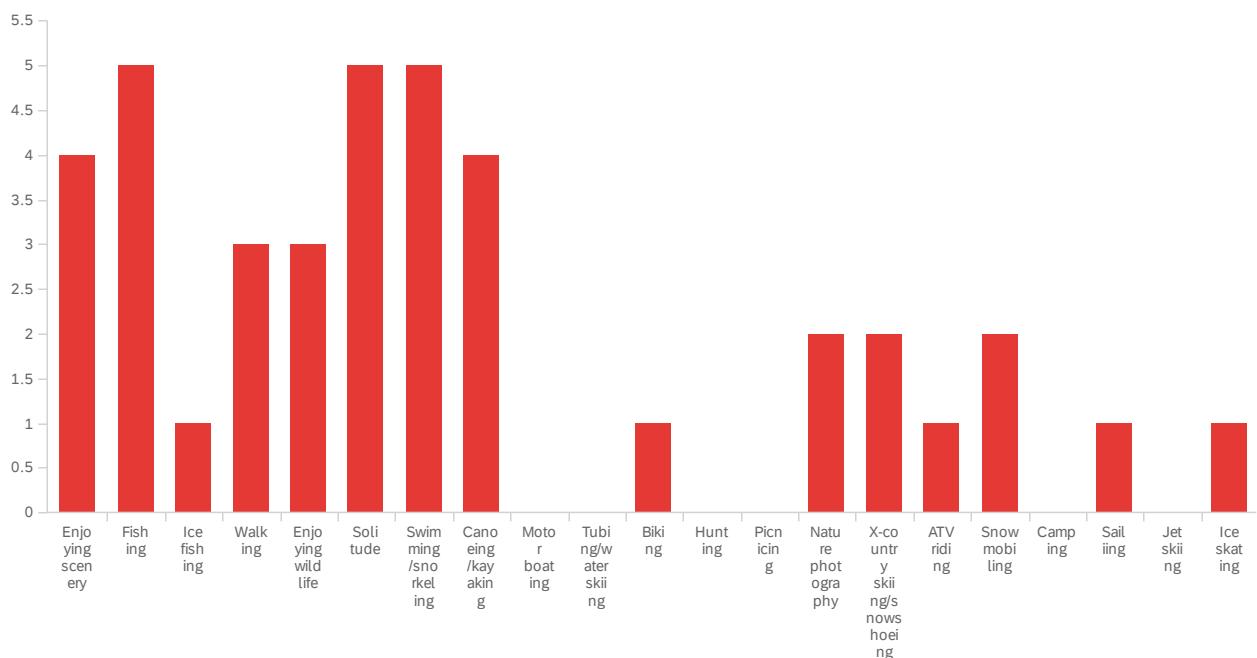

Make sure there are no septic systems entering the lake

Water quality improvement (prior septic issues, not sure if there are current issues). Algea cleanup, asses aquatic plant population

Major concern is amount of lake plants. Not sure if this is natural progrssion, but seems like more weeds that 40 years ago. Also lament the loss of crayfish years ago. The Rusty's drove them out as i understand, but now there are no crabs?

The swamp area at the north end of Green Lake used to provide a filtered inlet flow of fresh water into the lake. Ever since fill (soil) was added to build a trail/road with no culverts through the swamp portion of the Richard R Thompson property and other filling in of low land and development, the disrupting the natural filtered fresh water from the swamp into the lake has caused the water clarity of Green Lake to become far less clear and the weeds in the lake have increased dramatically. The proper thing to do would be have the Thompsons make corrections to restore the natural fresh water flow into the lake. It is the feeling of many property owners around & near the lake that this it the greatest factor contributing to the decline of Green Lake.

Q45 - What recreational activities do you partake in on Green Lake (check all that apply)?

#### Q46 - Other recreational activities not included above:

Other recreational activities not included above:

Partying :-)

NA

none

## Q49 - What could be done to improve your recreation experience on Green Lake?

What could be done to improve your recreation experience on Green Lake?

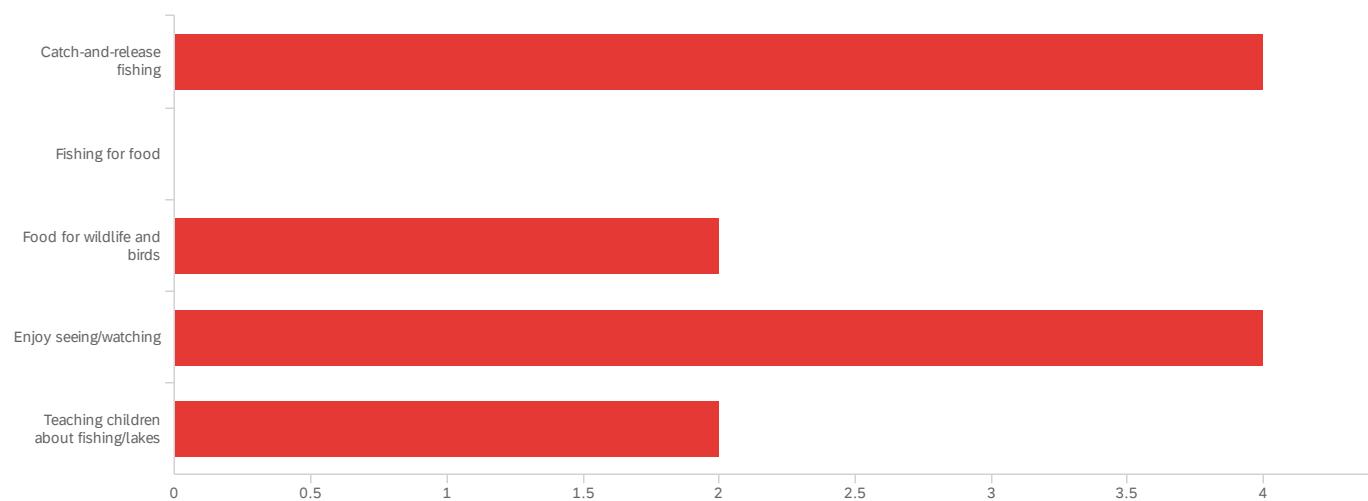

Keep good water quality

Better fishing (what happened to the perch?)

Again, need more education on the excessive(?) lake weeds. More of a county issue, but we are seeing mini-mansions sprout up on the lake shore (tear down old place, build new multi-story place. All for private property rights, but ruins the view as you paddle around the lake. Starting to look like a mini- Lake Monona or even Waubee.

Again, The swamp area at the north end of Green Lake used to provide a filtered inlet flow of fresh water into the lake. Ever since fill (soil) was added to build a trail/road with no culverts through the swamp portion of the Richard R Thompson property and other filling in of low land and development, the disrupting the natural filtered fresh water from the swamp into the lake has caused the water clarity of Green Lake to become far less clear and the weeds in the lake have increased dramatically. The proper thing to do would be have the Thompsons make corrections to restore the natural fresh water flow into the lake. It is the feeling of many property owners around & near the lake that this is the greatest factor contributing to the decline of Green Lake.

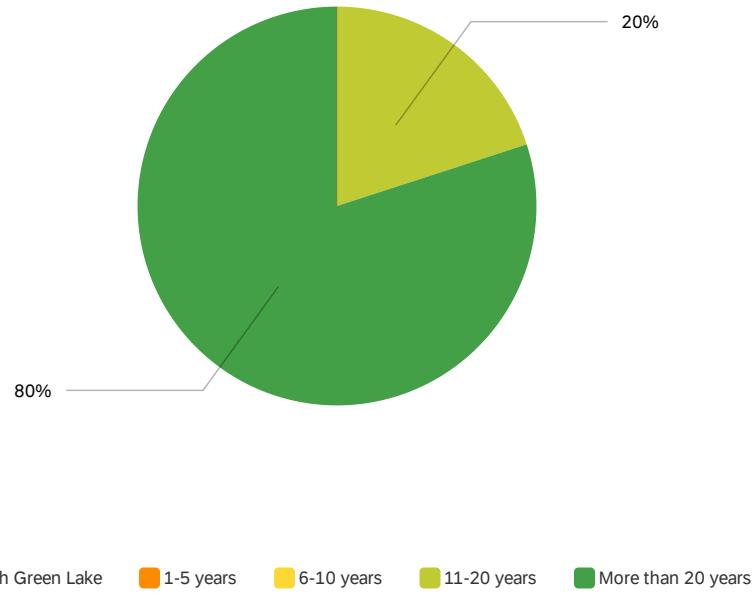

Q51 - For what purposes do you value the fishery in Green Lake? (Check all that apply)

## Q54 - What do you think has contributed to the change in fishing?

What do you think has contributed to the change in fishing?

Possibly some winter kill

Less fish, possibly due to Northern Pike I caught there a few years ago. Also, perch (down to zero?), and bludgail/croppy of catchable size are almost non-existant

Will i fish, don't do it enough to comment.

water clarity

Q55 - When and how often do you fish Green Lake?

## Q56 - What type of fish do you catch on Green Lake?

What type of fish do you catch on Green Lake?

Bass, Pan fish.

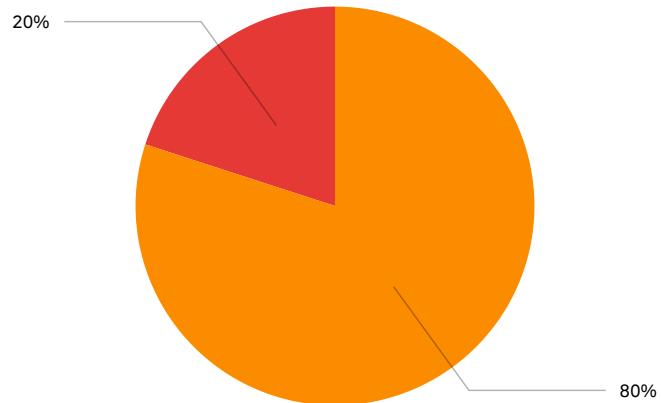

pan fish

Bass (caught two Northern a few years ago as well)

various pan fish, but i know there are bigger ones in there!

pan, crappie.

## Q57 - In general, how many of the fish you catch are big enough to keep?

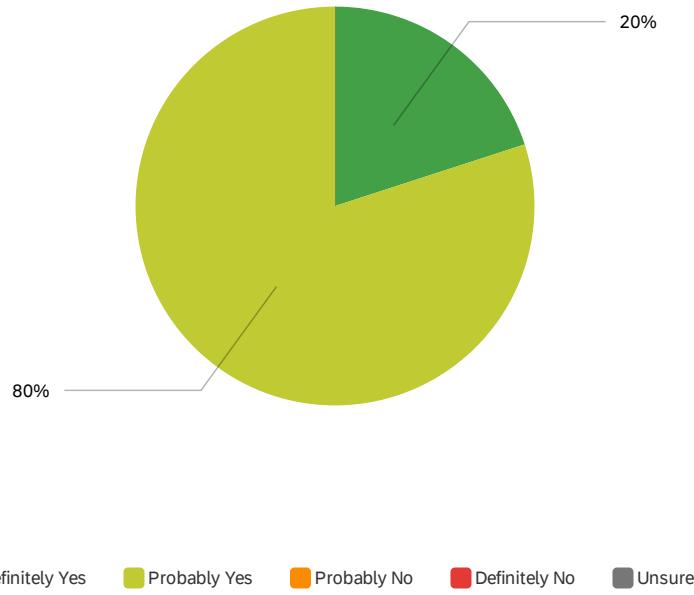

■ All ■ Most ■ Some ■ None

| # | Field | Choice | Count |
